DEPARTMENT OF ENERGY
Environmental Management Los Alamos Field Office (EM-LA)
Los Alamos, New Mexico 87544

EMLA-2021-0014-02-001

October 26, 2020

Mr. Kevin Pierard
Bureau Chief
Hazardous Waste Bureau
New Mexico Environment Department
2905 Rodeo Park Drive East, Building 1
Santa Fe, NM 87505-6313

Subject: Submittal of the 2020 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, Revision 1

Dear Mr. Pierard:

Enclosed please find two hard copies with electronic files of the "2020 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, Revision 1." Enclosure 1 includes an electronic copy of a redline strikeout version of the report that incorporates all changes made in response to the New Mexico Environment Department's draft comments dated July 20, 2020. A copy of the response is provided as Enclosure 2.

These reports are submitted in accordance with Appendix E, Section IV, of the June 2016 Compliance Order on Consent, as modified on February 27, 2017.

If you have any questions, please contact Steve Veenis at (505) 309-1362 (steve.veenis@em-la.doe.gov) or Hai Shen at (505) 257-7943 (hai.shen@em.doe.gov).

Sincerely,

Arturo Duran Digitally signed by Arturo Duran Date: 2020.10.22 14:03:37 -06'00'

Arturo Q. Duran
Compliance and Permitting Manager
Environmental Management
Los Alamos Field Office

Enclosures:

1. Two hard copies with electronic files (including a redline strikeout version) – 2020 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, Revision 1 (EM2020-0517)
2. Response to the New Mexico Environment Department's Draft Comments on the 2020 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, May 2020, HWB-LANL-20-032, Dated July 30, 2020 (EM2020-0399)

Subject: [EXT] Submittal to NMED on 10/26/2020 of 2020 Chromium PMR, Rev. 1

Mr. Pierard,
Attached for submittal is a pdf file of the following:

- Submittal of the 2020 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, Revision 1 (EMLA-2021-0014-02-001, letter, enclosure 2, and partial enclosure 1)

A DVD with all the files (including Appendix F data files) for the submittal has been taken to the NMED-HWB office today.
Please acknowledge receipt of this submittal by responding to this email.
Let me know if you have any questions.
Thank you.

Response to the New Mexico Environment Department's Draft Comments on the 2020 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, May 2020, HWB-LANL-20-032, Dated July 30, 2020

INTRODUCTION

To facilitate review of this response, the New Mexico Environment Department's (NMED's) comments are included verbatim. The U.S. Department of Energy (DOE) Environmental Management Los Alamos Field Office responses follow each NMED comment. All information associated with analyses of radionuclides is voluntarily provided to NMED in accordance with DOE policy.

SPECIFIC COMMENTS

NMED Comment

1. Section 5.2.2.1 Perched-Intermediate Monitoring Wells, MCOI-5, Page 10:

a. ***DOE Statement:*** *"At MCOI-5, 1,4-dioxane concentrations were detected over the NMED tap water screening level (screening value) of 4.59 µg/L during the May 8, 2019, sampling event with a concentration of 22.9 µg/L."*

NMED Comment: *The Report indicates that 1,4-dioxane was detected above the screening value at MCOI-5 in the third quarter of MY2019 and it was included in Table C-1. Table 3.4-1 of the approved MY2020 IFGMP indicates low-level 1,4-dioxane was proposed for annual analysis at MCOI-5 presumably during the first quarter of MY2020 when the other wells were sampled. However, Table C-1 does not include the results for low-level 1,4-dioxane for MCOI-5 from first quarter and the deviation is neither reported in Table 2.1-1 nor discussed in the text. Please revise the Report to include the result for this analysis in Section 5.2.2.1 and Table C-1 or provide a justification for not meeting the objectives of approved MY2020 IFGMP.*

b. ***DOE Statement:*** *"At MCOI-5, nitrate-nitrite as nitrogen concentrations were detected above the EPA MCL screening value of 10 mg/L during the January 11, 2019; May 8, 2019; and July 24, 2019, sampling events with the respective concentrations of 14.0 mg/L, 12.5 mg/L, and 11.6 mg/L. …At MCOI-5, perchlorate concentrations were detected above the NMED tap water screening level of 13.8 µg/L during the January 11, 2019; May 8, 2019; and July 24, 2019, sampling events with the respective concentrations of 213.0 µg/L, 170.0 µg/L, and 151.0 µg/L."*

NMED Comment: *The Report indicates that nitrate-nitrite as nitrogen and perchlorate were detected at MCOI-5 during the last three quarters of MY2019. Table 3.4-1 of the MY2020 IFGMP indicates that these parameters were to be sampled and analyzed quarterly at MCOI-5 starting with the first quarter of MY2020. However, Table C-1 does not include the results for first quarter for these parameters (i.e., metals, inorganics, volatile and semi-volatile organics) at MCOI-5 and the deviations are not reported in Table 2.1-1 or discussed in the text. Please revise the Report to include the results for these analyses in Section 5.2.2.1 and Table C-1 or provide justification for not meeting the objectives of MY2020 IFGMP.*

DOE Response

1.a. Low-level 1,4-dioxane was scheduled to be sampled in monitoring year (MY) 2020 quarter 1 for annual sampling at MCOI-5. Because of limited water, a prioritized suite was collected at MCOI-5 on November 13, 2019. The prioritized suite consisted only of per- and polyfluoroalkyl substances (PFAS), and did not include low-level 1,4-dioxane.

Table 2.1-1 of the report will be modified to include the following:

Sampling Event		Watershed	Monitoring Location	Observation/Deviation	Cause	Comments
Monitoring Year	Quarter					
Quarterly Sampling						
2020	1	Mortandad	MCOI-5	Limited analytical data will be available for this site.	A prioritized suite was collected.	A prioritized suite consisting only of PFAS was collected because of limited available water.

Because the prioritized analytical suite did not include low-level 1,4-dioxane analysis, these results will not be included in Appendix C, Table C-1 on page C-11.

1.b. General inorganics, which include nitrate-nitrite as nitrogen and perchlorate, were scheduled to be analyzed in MY 2020 quarter 1. Because of limited water, a prioritized suite was collected at MCOI-5 on November 13, 2019. The prioritized suite consisted only of PFAS and did not include general inorganics.

Table 2.1-1 of the report will be modified to include the following (same as comment 1a):

Sampling Event		Watershed	Monitoring Location	Observation/Deviation	Cause	Comments
Monitoring Year	Quarter					
Quarterly Sampling						
2020	1	Mortandad	MCOI-5	Limited analytical data will be available for this site.	A prioritized suite was collected.	A prioritized suite consisting only of PFAS was collected because of limited available water.

Because the prioritized analytical suite did not include general inorganics, these results will not be included in Appendix C, Table C-1 on page C-11.

NMED Comment

2. ***Section 6.3, Data Gaps, Page 13; Table 2.1-1, Chromium Investigation Monitoring Group PME Observations and Deviations, Page 33:***

   DOE Statement: *"Table 2.1-1 summarizes the deviations from the planned monitoring scope for this PMR."*

   NMED Comment: *Table 2.1-1 does not include deviations for the first quarter of MY2020 regarding the non-reporting of detections at MCOI-5 (Comment No. 1). If there were deviations from the IFGMP sampling objectives for MCOI-5 during this event, please revise Table 2.1-1 to include these deviations.*

DOE Response

2. Because of limited water, a prioritized suite was collected at MCOI-5 on November 13, 2019. The prioritized suite consisted only of PFAS.

   Table 2.1-1 of the report will be modified to include the following (same as comment 1a and 1b):

Sampling Event		Watershed	Monitoring Location	Observation/Deviation	Cause	Comments
Monitoring Year	Quarter					
Quarterly Sampling						
2020	1	Mortandad	MCOI-5	Limited analytical data will be available for this site.	A prioritized suite was collected.	A prioritized suite consisting only of PFAS was collected because of limited available water.

NMED Comment

3. ***Table 5.2-1, Chromium Investigation Monitoring Group Results Above Screening Values, Page 47:***

   NMED Comment: *Please revise the table to include a narrative in Section 5.2.2.1 to report the low-level 1,4-dioxane detection of 28.3 ug/L in MCOI-6 during the first quarter MY2020 sampling event.*

DOE Response

3. Currently, text for MCOI-6 in section 5.2.2.1 includes the low-level 1,4-dioxane detection of 28.3 µg/L obtained during the MY 2020 quarter 1 sampling event. The text currently states:

   > "A concentration of 28.3 µg/L for the November 14, 2019, event was obtained using a low-level selected ion monitoring (SIM) method, and had a 4× dilution factor. This is the first year that the low-level method was used, and focused validation is ongoing."

   DOE proposes leaving the text as is.

NMED Comment

4. Appendix C, Table C-1 Analytical Results from the Periodic Monitoring Event Reported in this Periodic Monitoring Report, Page C-11.

NMED Comments: *Please revise Appendix C to include the results or a justification for not reporting the following results in Appendix C Table C-1; these were proposed for sampling in approved MY2019 and MY2020 IFGMPs:*

a. There are no first quarter MY2020 sampling results reported for MCOI-5 for metals, semi-annual VOCs and SVOCs, general inorganics, and annual tritium and radionuclides as indicated in Table 3.4-1 of the MY2019 and the MY2020 IFGMPs, and no annual results reported for low-level 1,4-dioxane (Comment No. 1) and low-level nitrosamines, as indicated in Table 3.4-1 of the MY2020 IFGMP.

b. There are no sampling results reported for prometon for all wells except for R-61 S1 as proposed in Table 3.4-1 of the MY2020 IFGMP.

c. There are no results reported for low-level tritium for the fourth quarter MY2019 and for the first quarter MY2020 for the Chromium Interim Measures monitoring wells as proposed in Table 3.4-1 of the approved MY2019 and MY2020 IFGMPs.

d. There are no annual results reported for low-level tritium at SCI-1, R-1, R-13 and R-15 as proposed in Table 3.4-1 of the approved MY2019 and MY2020 IFGMPs.

DOE Response

4.a. Because of limited water, a prioritized suite was collected at MCOI-5 on November 13, 2019. The prioritized suite consisted only of PFAS and did not include metals, volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), general inorganics, tritium and radionuclides, low-level 1,4-dioxane, and low-level nitrosomines.

Table 2.1-1 of the report will be modified to include the following (same as comment 1a, 1b, and 2):

Sampling Event		Watershed	Monitoring Location	Observation/Deviation	Cause	Comments
Monitoring Year	Quarter					
Quarterly Sampling						
2020	1	Mortandad	MCOI-5	Limited analytical data will be available for this site.	A prioritized suite was collected.	A prioritized suite consisting only of PFAS was collected because of limited available water.

Because the prioritized analytical suite did not include metals, VOCs, SVOCs, general inorganics, tritium and radionuclides, low-level 1,4-dioxane, and low-level nitrosomines, these results will not be included in Appendix C, Table C-1, on page C-11.

4.b. Prometon and sulfolane were added to the New Mexico Water Quality Control Commission toxic pollutants list in December 2018. General Engineering Laboratories, LLC (GELC) was contracted to

perform the analysis; however, they were not certified under the U.S. Department of Energy Consolidated Audit Program (DOECAP). GELC became DOECAP certified by December 24, 2019.

As a result, prometon and sulfolane results from samples collected before GELC was DOECAP certified for prometon and sulfolane analyses (between October 1, 2019, and December 24, 2019) were held within the Environmental Information Management System (EIM) until the samples were reanalyzed and reported under GEL's DOECAP prometon and sulfolane certifications. The hold flag on the prometon and sulfolane results within EIM was not removed. As a result, the data were held within EIM and not included in the data pull for this report.

All wells scheduled to be analyzed for prometon and sulfolane were successfully sampled and analyzed with the exception of MCOI-5, R-70 Screen 1 (S1), and R-70 Screen 2 (S2). MCOI-5 will be added to the deviation table (same as comment 1a, 1b, and 2). R-70 S1 and R-70 S2 were canceled because of mechanical issues and are listed in Table 2.1-1 as a deviation.

R-61 Screen 1 (S1) was sampled on November 20, 2019, and analyzed on December 30, 2019. These data were not held and are included in the report.

Appendix C will be revised to include the prometon and sulfolane data that were previously held within EIM as part of Revision 1 of the periodic monitoring report.

4.c. Low-level tritium results for the fourth quarter of MY 2019 and for the first quarter of MY 2020 for the chromium interim measures monitoring wells were incorrectly coded as "screening" for the analytical laboratory quality control (QC) reporting option, and therefore were not included as part of the periodic monitoring report (PMR).

The laboratory QC reporting option has been corrected to "standard." Appendix C will be revised to include the low-level tritium results as part of Revision 1 of the periodic monitoring report.

4.d. Low-level tritium results for SCI-1, R-1, R-13, and R-15 were incorrectly coded as "screening" for the laboratory QC reporting option and therefore were not included as part of the PMR.

The laboratory QC reporting option has been corrected to "standard." Appendix C will be revised to include the low-level tritium results as part of Revision 1 of the periodic monitoring report.

EXECUTIVE SUMMARY

This annual periodic monitoring report (PMR) presents results for the Chromium Investigation monitoring group of the Newport News Nuclear BWXT-Los Alamos, LLC, groundwater monitoring program that have not been previously reported. All monitoring work reported in this PMR was conducted pursuant to the "Interim Facility-Wide Groundwater Monitoring Plan for the 2019 Monitoring Year, October 2018–September 2019" (hereafter referred to as the 2019 IFGMP) and the "Interim Facility-Wide Groundwater Monitoring Plan for the 2020 Monitoring Year, October 2019–September 2020" (hereafter referred to as the 2020 IFGMP), both prepared in accordance with the Compliance Order on Consent.

All active monitoring locations in the Chromium Investigation monitoring group are located within the Mortandad Canyon and Sandia Canyon watersheds. The Chromium Investigation monitoring group includes the monitoring of groundwater well and well screen locations; there are no base-flow monitoring locations in this monitoring group.

This PMR presents monitoring results for four quarterly periodic monitoring events (PMEs) conducted during the second, third, and fourth quarters of monitoring year (MY) 2019 and the first quarter of MY 2020, as well as an additional six monthly PMEs conducted during the second, third, and fourth quarters of MY 2019. In addition to results from these PMEs, results are reported for the previous four PMEs, as well as earlier Chromium Investigation monitoring group PMEs that have not yet been reported because the validated laboratory data were not available at the time of the previous Chromium Investigation PMR publications.

Groundwater samples collected during the PMEs were analyzed for all or some of the following analytical groups as specified in the 2019 IFGMP and 2020 IFGMP: metals; radionuclides; tritium and low-level tritium; semivolatile organic compounds; volatile organic compounds; general inorganic chemicals (including perchlorate); polychlorinated biphenyls; low-level 1,4-dioxane; low-level nitrosamines; and per- and polyfluoroalkyl substances. The same samples were also analyzed for field parameters, including dissolved oxygen, flow rate (in gallons per minute), oxidation-reduction potential, pH, specific conductance, temperature, and turbidity.

A total of 44 groundwater analytical results reported in this PMR were detected above applicable screening values.

1.0 INTRODUCTION

This annual periodic monitoring report (PMR) for the Chromium Investigation monitoring group provides documentation of the following groundwater periodic monitoring events (PMEs) conducted by Newport News Nuclear BWXT-Los Alamos, LLC (N3B):

Watershed	PMEs Reported in this PMR		PME Field Sampling	
	Monitoring Year	Quarter	Begin	End
Mortandad/Sandia	2019	2	01/09/2019[a]	01/26/2019
			02/11/2019[b]	02/21/2019
			03/14/2019[b]	03/22/2019
		3	04/16/2019[b]	04/30/2019
			05/08/2019[a]	05/21/2019
			06/06/2019[b]	06/18/2019
		4	07/09/2019[a]	07/26/2019
			08/13/2019[b]	08/27/2019
			09/12/2019[b]	09/26/2019
	2020	1	11/05/2019[a]	11/20/2019

[a] Quarterly sampling event.

[b] Monthly sampling event.

The annual Chromium Investigation monitoring group PMR is submitted to the New Mexico Environment Department (NMED) every May. This PMR includes results from the Chromium Investigation monitoring group PMEs performed through the first quarter of the 2020 monitoring year. This PMR presents monitoring results for four quarterly PMEs conducted during the second, third, and fourth quarters of the 2019 monitoring year and the first quarter of the 2020 monitoring year, as well as an additional six monthly PMEs conducted during the second, third and fourth quarters of the 2019 monitoring year. In addition to results from the PMEs listed in the table above, results are reported for the previous four PMEs, as well as earlier Chromium Investigation monitoring group PMEs that have not yet been reported because the validated laboratory data were not available at the time of the previous Chromium Investigation PMR publications.

The PMEs reported in this PMR included sampling of groundwater wells pursuant to the “Interim Facility-Wide Groundwater Monitoring Plan for the 2019 Monitoring Year, October 2018–September 2019” (hereafter referred to as the 2019 IFGMP) (N3B 2018, 700000) and the “Interim Facility-Wide Groundwater Monitoring Plan for the 2020 Monitoring Year, October 2019–September 2020” (hereafter referred to as the 2020 IFGMP) (N3B 2019, 700451), both prepared in accordance with the 2016 Compliance Order on Consent (the Consent Order).

Section IX of the Consent Order describes the role of data screening in the corrective action process. Screening values are used to identify the *potential* for unacceptable risk resulting from the presence of contaminants in groundwater and surface water. Screening values for evaluating IFGMP monitoring data include New Mexico Water Quality Control Commission (NMWQCC) groundwater standards, U.S. Environmental Protection Agency (EPA) maximum contaminant levels (MCLs), NMED screening levels for tap water, and EPA regional screening levels for tap water. Additional risk evaluation is required to determine the potential need for cleanup (corrective action) if results indicate that contaminants are present at concentrations above screening values.

This report presents the following information:

- general background information for the Chromium Investigation monitoring group
- scope of activities for the Chromium Investigation monitoring group
- regulatory criteria for screening analysis
- monitoring results (field parameters, groundwater elevations)
- analytical data results
- summary of the monitoring data and the results of screening analysis

All information associated with analyses of radionuclides is voluntarily provided to NMED in accordance with U.S. Department of Energy (DOE) policy.

1.1 Background

The Chromium Investigation monitoring group is located in Sandia Canyon and Mortandad Canyon watersheds. Monitoring focuses on the characterization, fate, and transport of chromium contamination in perched-intermediate groundwater and within the regional aquifer. The distribution of wells in the monitoring group also addresses historical releases from Outfall 051, which discharges from the Radioactive Liquid Waste Treatment Facility (RLWTF) in the Mortandad Canyon watershed. Perennial stream flow and saturated alluvial groundwater conditions occur in the upper and middle portions of the canyon system because sanitary wastewater and cooling tower effluent discharge to the canyon from operating facilities, and is believed to be the main source of contamination. Effluent discharge was suspended from 2011 to June 2019 because of process changes at the RLWTF.

Sandia Canyon is located on Los Alamos National Laboratory (LANL or the Laboratory) property within Technical Area 03 (TA-03) at an elevation of approximately 7300 ft above mean sea level (amsl) and trends east-southeast across the Laboratory, Bandelier National Monument, and San Ildefonso Pueblo. Sandia Canyon empties into the Rio Grande in White Rock Canyon at an elevation of 5450 ft amsl. The area of the Sandia Canyon watershed is approximately 5.5 mi^2. Perennial stream flow and saturated alluvial groundwater conditions occur in the upper and middle portions of the canyon system because sanitary wastewater and cooling tower effluent discharge to the canyon from operating facilities, and is believed to be the main source of contamination. A wetland of approximately 7 acres has developed as a result of the effluent discharge. The only known perennial spring in the watershed (Sandia Spring) is located in lower Sandia Canyon near the Rio Grande. Technical areas located in the Sandia Canyon watershed are TA-03, TA-53, TA-60, TA-61, TA-72, and former TA-20. A total of 261 solid waste management units (SWMUs) and areas of concern (AOCs) are located within the portions of these TAs in the Sandia Canyon watershed; 179 of the SMWUs and AOCs are located in Upper Sandia Canyon Aggregate Area, and 82 SMWUs and AOCs are located in Lower Sandia Canyon Aggregate Area.

Mortandad Canyon is an east-to-southeast trending canyon that heads on the Pajarito Plateau near the main Laboratory complex at TA-03 at an elevation of 7380 ft amsl. The drainage extends about 9.6 mi from its headwaters to its confluence with the Rio Grande at an elevation of 5440 ft amsl. The canyon crosses San Ildefonso Pueblo land for several miles before joining the Rio Grande (LANL 1997, 056835). The Mortandad Canyon watershed is located in the central portion of the Laboratory and covers approximately 10 mi^2. The Mortandad Canyon watershed contains several tributary canyons including Ten Site Canyon, Pratt Canyon, Effluent Canyon, and Cañada del Buey, which have received contaminants released during Laboratory operations. Technical areas located in the Mortandad Canyon watershed are TA-03, TA-05, TA-35, TA-48, TA-50, TA-52, TA-55, TA-60, TA-63, former TA-04, and former TA-42. A total of 257 SWMUs and AOCs are located within the portions of these technical areas in

the Mortandad Canyon watershed; 119 of the SMWUs and AOCs are located within Upper Mortandad Canyon Aggregate Area, 132 SMWUs and AOCs are located in Middle Mortandad/Ten-Site Canyons Aggregate Area, and 6 SMWUs and AOCs are located in Lower Mortandad/Cedro Canyons Aggregate Area.

For wells reported in this PMR, Sandia Canyon chromium concentrations exceed the 50-µg/L NMWQCC groundwater standard in intermediate well SCI-2 and regional aquifer well R-43 screen 1. In Mortandad Canyon, chromium concentrations exceed the 50-µg/L NMWQCC groundwater standard in intermediate well MCOI-6 and regional aquifer wells R-50 screen 1 and R-62. The primary source of chromium is chromium-contaminated water discharged from the TA-03 power plant cooling tower from 1956 to 1972.

For wells reported in this PMR, perchlorate exceeds the 13.8-µg/L NMWQCC groundwater standard in Mortandad Canyon intermediate wells MCOI-5 and MCOI-6, and regional well R-61 screen 1, the primary source of which is effluent discharged from the TA-50 RLWTF. Other constituents detected above background in wells in the Chromium Investigation monitoring group include nitrate and tritium. A conceptual model for the sources and distribution of these contaminants is presented in the “Investigation Report for Sandia Canyon” (LANL 2009, 107453) and the “Phase II Investigation Report for Sandia Canyon” (LANL 2012, 228624).

The conceptual model hypothesizes that chromium and other contaminants originate from releases into the headwaters of Sandia Canyon, were transported by surface water to infiltration sites downcanyon, migrated through the vadose zone with lateral migration pathways that moved contamination to locations beneath Mortandad Canyon, and contaminated the regional aquifer. For this reason, perched-intermediate and regional wells beneath Sandia and Mortandad Canyon are included in the Chromium Investigation monitoring group. These sources and the migration pathways are described in the “Investigation Report for Sandia Canyon” (LANL 2009, 107453) and the “Phase II Investigation Report for Sandia Canyon” (LANL 2012, 228624).

2.0 SCOPE OF ACTIVITIES

All active monitoring locations in the Chromium Investigation monitoring group are located within Mortandad Canyon and Sandia Canyon watersheds. Monitoring locations include 4 groundwater wells completed within the perched-intermediate aquifer, and 23 groundwater wells completed within the deep regional aquifer.

Groundwater samples collected during the PMEs were analyzed for all or some of the following analytical groups as specified in the 2019 IFGMP (N3B 2018, 700000) and 2020 IFGMP (N3B 2020, 700451): metals; radionuclides; tritium and low-level tritium; semivolatile organic compounds (SVOCs); volatile organic compounds (VOCs); general inorganic chemicals (including perchlorate); polychlorinated biphenyls; low-level 1,4-dioxane; low-level nitrosamines; and per- and polyfluoroalkyl substances (PFAS). The same samples were also analyzed for field parameters including dissolved oxygen, flow (in gallons per minute), oxidation-reduction potential, pH, specific conductance, temperature, and turbidity.

Purge water is managed and characterized in accordance with the relevant version of the waste characterization strategy form (WCSF) “WCSF–Interim Facility-Wide Groundwater Monitoring” (LANL 2016, 601812). Purge water is stored until characterization is complete, and if requirements are met, the purge water can be land applied in accordance with the standard operating procedure (SOP) “Land Application of Groundwater” (N3B-EPC-CP-QP-010 Rev 4) and standing order “Land Application of Groundwater” (N3B-SO-ER-0003), which implements the NMED-approved decision tree for land application of drilling, development, rehabilitation, and purge water. Purge water has been consolidated for

off-site disposal because of new regulatory requirements for chemicals that were not analyzed at the time of sampling. Purge water will be land applied if all land application crtieria are met.

Table 2.0-1 provides the location name and watershed; the monitoring year and quarter of the sampling event; the sample collection date; the well screened interval and top and bottom screen depths; and the casing volume, purge volume, and purge or flow rate for each sampling event. Figure 2.0-1 is a Chromium Investigation monitoring group vicinity map. Monitoring locations are shown in Figure 2.0-2.

2.1 Deviations from Planned Scope

Table 2.1-1 summarizes the deviations from the planned monitoring scope for this annual PMR.

3.0 REGULATORY CRITERIA

Regulatory criteria related to groundwater quality form the basis for the screening values to which groundwater monitoring results are compared in this PMR. These criteria include the NMWQCC groundwater standards, EPA MCLs, NMED screening levels for tap water, and EPA regional screening levels for tap water. These criteria are used to screen results in accordance with the process specified in Section IX of the Consent Order, as listed in Table 3.0-1.

Monitoring data are evaluated using the screening process described below. The sources for standards and screening levels from which specific screening values are established are listed in Table 3.0-1.

- For each individual substance, the lower concentration of the NMWQCC groundwater standard or the EPA MCL is used as the screening value.
- If an NMWQCC groundwater standard or an EPA MCL has not been established for a specific substance for which toxicological information is published, the NMED screening level for tap water is used as the groundwater screening value. NMED screening levels are established for either a cancer- or noncancer-risk type; for the cancer-risk type, screening levels are based on a 10^{-5} excess cancer risk. This report was prepared using the 2019 NMED Risk Assessment Guidance for Site Investigations and Remediation (NMED 2019, 700550).
- If the NMED screening level for tap water has not been established for a specific substance for which toxicological information is published, the EPA regional screening level for tap water is used as the groundwater screening value. The EPA screening levels are established for either a cancer- or noncancer-risk type. For the cancer-risk type, the Consent Order specifies screening at a 10^{-5} excess cancer risk. The EPA screening levels for tap water are at 10^{-6} excess cancer risk; therefore, 10 times the EPA 10^{-6} screening levels are used in the screening process. This report was prepared using the November 2019 EPA regional screening levels for tap water (http://www.epa.gov/risk/risk-based-screening-table-generic-tables).
- The NMWQCC groundwater standards apply to the dissolved (filtered) portion of specified contaminants; however, the standards for mercury, organic compounds, and nonaqueous-phase liquids apply to the total unfiltered concentrations of the contaminants. For this report, EPA MCLs are applied to both filtered and unfiltered sample results.
- Base-flow monitoring locations are assigned to one of two screening categories based upon the hydrology of the water body being monitored—perennial or intermittent-ephemeral. This category, along with a hardness value, determines the screening values used for data at each monitoring location. Hardness-dependent screening values used to screen data at each base-flow monitoring location are determined from the 20.6.4.900 New Mexico Administrative Code (NMAC)

"Water Quality Standards for Interstate and Intrastate Surface Waters." Hardness-dependent acute and hardness-dependent chronic aquatic life criteria for metals are calculated using the hardness-dependent equations in accordance with the requirements of 20.6.4.900.I NMAC. Hardness-dependent acute and hardness-dependent chronic criteria were used for total recoverable aluminum and dissolved cadmium, chromium, copper, lead, manganese, nickel, silver, and zinc in accordance with the requirements therein.

4.0 MONITORING RESULTS

4.1 Methods and Procedures

All methods and procedures used to perform the field activities associated with the data reported in this PMR are documented in the 2019 IFGMP (N3B 2018, 700000) and 2020 IFGMP (N3B 2019, 700451).

4.2 Comparison of Target Analytes and Method Detection Limits

Several analytes have a range of method detection limits (MDLs). For some of these analytes, the MDL is much lower than for earlier analyses. Table 4.2-1 presents a list of target analytes with MDLs equal to or above screening values. Table 4.2-2 presents a list of analytes where the lower range of MDLs is below the screening value but the upper portion of the range is above the screening value. The analytical method and analytical laboratory are included in the tables for reference.

4.3 Field Parameter Results

Appendix A presents field parameter measurements associated with the sampling and analytical data reported in this PMR. The parameters are dissolved oxygen, flow rate, oxidation-reduction potential, pH, specific conductance, temperature, and turbidity. Table 2.1-1 notes any instances where the parameter stabilization requirement could not be met.

4.4 Groundwater Elevations

The groundwater elevations are measured at each monitoring location before purging and sampling at that location as required by the Consent Order.

In addition to collecting groundwater-elevation data before purging and sampling, N3B collects groundwater-elevation data continuously (e.g., hourly, daily) for most monitoring locations, and these data are voluntarily presented in this PMR. Any gaps in the continuous groundwater-elevation records presented in this PMR are a result of one or more of the following conditions:

- The well is dry.
- The well is not equipped with a pressure (level) transducer.
- The water level is below the transducer.
- The transducer is not functioning properly (including failure).
- The transducer is temporarily removed from the well for maintenance and/or calibration.

Data gaps exist at the following locations:

- MCA-9, MCO-9, and MCO-12 are alluvial water level monitoring wells to meet the Discharge Permit 1793 requirement to monitor historically dry wells for verification that land application of wastewater does not result in local saturation. MCA-9 had water in the sump and data collected here is therefore not considered valid because this water is not groundwater. MCO-9 and MCO-12 were dry during the PMEs reported in this PMR.
- MCOI-4 has intermittent water levels; at times water levels are in the sump.
- R-11 had a data gap in 2017; no transducer was installed.
- SCI-1 had a data gap in 2016; no pump was installed.

Groundwater-elevation data from the end of the previous PME and through the end of the PMEs in this report are presented in Appendix B (on CD included with this document), and include all continuous groundwater-elevation data.

Groundwater-elevation measurements are shown graphically on Plate 1. For wells equipped with transducers, the reported groundwater elevation was the first measurement taken each day. Figure 4.4-1 shows the elevation of the regional groundwater surface and flow directions. No perched-intermediate groundwater contours are shown; however, all groundwater-elevation data for locations with transducers are reported in Appendix B and on Plate 1.

5.0 ANALYTICAL DATA RESULTS

5.1 Methods and Procedures

All methods and procedures used to perform PME analytical activities are documented in the 2019 IFGMP (N3B 2018, 700000) and 2020 IFGMP (N3B 2019, 700451).

Sampling and data validation were conducted using SOPs that are part of a comprehensive quality assurance/quality control (QA/QC) program. SOPs include the most current version of the following:

- “WCSF–Interim Facility-Wide Groundwater Monitoring” (N3B-EP2016-0117)
- “Groundwater Sampling” (N3B-SOP-ER-3003)
- “Groundwater Sampling” (IWD-TPMC-LA-16-049)
- “Wireless Connect/Non-connected Component Plan – Standalone Wireless System Name: Groundwater Monitoring Well Data Acquisition System” (N3B-SD-016-CP-032/L2)
- “Locus Mobile Application for Groundwater Data Collection” (N3B-SOP-ER-20324)
- “Groundwater Sampling and Sample Preservation” (N3B-ER-IWD-20088)
- “Manual Groundwater Level Measurements” (N3B-SOP-ER-3001)
- “Groundwater Level Data Processing, Review, and Validation” (N3B-SOP-ER-3004)
- “Validation of Volatile Organic Compound Analytical Data” (N3B-ER-AP-20309)
- “Validation of Semivolatile Organic Compound Analytical Data” (N3B-ER-AP-20310)
- “Validation of LC-MS/MS High Explosive Analytical Data” (N3B-ER-AP-20316)
- “Validation of Organochlorine Pesticide and Polychlorinated Biphenyl Analytical Data” (N3B-ER-AP-20311)

- "Validation of Metals and Cyanide Analytical Data" (N3B-ER-AP-20313)
- "Validation of Gamma Spectroscopy, Chemical Separation Alpha Spectrometry, Gas Proportional Counting, and Liquid Scintillation Analytical Data" (N3B-ER-AP-20314)
- "Validation of General Chemistry Analytical Data" (N3B-ER-AP-20315)
- "Validation of Dioxin and Furan Analytical Data" (N3B-ER-AP-20317)
- "Validation of LC-MS/MS Perchlorate Analytical Data" (N3B-ER-AP-20320)

Samples to be collected are planned using 2019 IFGMP and 2020 IFGMP Tables 1.7-2, 1.8-1, 1.9-1, 1.11-1, and 2.4-1 through 8.3-1 (N3B 2018, 700000; N3B 2019, 700451). Sample plans include additional field collection, transportation, and field QA/QC criteria as identified in the N3B and project data quality objectives and in the Consent Order. A sample collection log is created and printed to serve as a chain-of-custody (COC) document and an analytical request form.

Field QA/QC samples consist of field blanks (FBs), equipment rinsate blanks (EQBs), performance evaluation blanks (PEBs), field trip blanks (FTBs), and field duplicates (FDs). They are used to detect possible field, transportation, or analytical laboratory contamination; PEBs also track analytical laboratory performance. Differences in analytical results between an FD and its regular sample, for example, may indicate the samples were not uniform, or that significant variation in analysis occurred between the two samples.

FBs consist of deionized water from the Storm Water Processing Facility that is subjected to the same conditions as regular samples. FBs are collected at a minimum frequency of 10% of all samples, and are collected from locations where regular samples for all constituents are collected. FBs are analyzed for the same suites of analytes except for high explosives compounds. Detection of analytes in FBs may indicate contamination of the deionized water source, the sample bottles, or contamination from sampling methods, transportation, or the analytical laboratory.

EQBs are used to detect any contamination resulting from contaminated equipment or poor decontamination techniques. The EQB is prepared by passing deionized water through unused or decontaminated sampling equipment. EQBs are collected before a well is sampled when necessary.

PEBs are deionized water blanks from the Storm Water Processing Facility submitted as regular samples without any indication they are QA/QC samples. PEBs are used to evaluate contamination from sample, transportation, and analytical processes. One PEB is collected per sampling campaign and analyzed for total organic carbon and for the full suite of constituents analyzed during the sampling campaign.

FTBs consist of organic-free deionized water prepared by an independent off-site laboratory that accompany regular samples collected for VOC analyses. FTBs are used to identify potential VOC contamination that may occur during sample collection, handling, shipping, and storage, or during the analytical process, and are analyzed for VOCs only. A minimum of one FTB per cooler containing samples for VOC analyses is required. However, to facilitate data validation, one FTB may be included with each sample submitted for VOC analysis.

FDs are collected at a rate of 10% of all samples collected during a sampling campaign. FDs are distributed proportionally among surface water, alluvial groundwater, and intermediate/regional groundwater according to the relative number of samples collected for each type of water. FDs are split samples that provide information about field variation of sampling results as well as analytical laboratory variation. They may reveal sampling techniques and sampling process with poor reproducibility.

Following sample collection, sampling personnel deliver the samples and the field collection log to sample management personnel at the N3B Sample Management Office. An analytical COC is then created, which includes the field sample identification (ID) number, the date and time of field sample collection, the analytical parameters group code, and the number of bottles for each analytical parameters group.

In addition to the field QA/QC samples, additional laboratory batch QA/QC samples, such as matrix spikes, duplicates, method blanks, and laboratory control samples, are analyzed to monitor laboratory analytical processes. The laboratory QA/QC process is defined in the appropriate analytical method, N3B's Exhibit "D" Scope of Work and Technical Specifications for Off-Site Analytical Laboratory Services, and/or the Consent Order.

N3B data validation is performed externally from the analytical laboratory and end users of the data and this data validation process applies a defined set of performance-based criteria to analytical data that may result in qualification of that data. Data validation provides a level of assurance, based on this technical evaluation, of the data quality. N3B validation of chemistry data includes a technical review of the analytical data package, covering the evaluation of both field and laboratory QC samples, the identification and quantitation of analytes, and the effect of QC deficiencies on analytical data, as well as other factors affecting the data quality.

The analytical data are submitted by the analytical laboratory in a pdf data package format and an electronic data deliverable uploaded to the N3B Environmental Information Management System (EIM). The data are then validated both manually and in the EIM autovalidation process, then reviewed by an N3B chemist at the appropriate level, and then fully transferred into EIM.

This validation follows processes described in the N3B validation procedures listed above. Validation qualifiers and reason codes applied during this process are also reviewed and approved by an N3B chemist to assess data usability. The EIM data are then made available to the public in the Intellus New Mexico database (http://intellusnm.com/).

5.2 Analytical Data

Appendix C presents the analytical data for the PMEs reported in this PMR and from the previous four sampling events. The data were reviewed for conformance with regulatory and N3B requirements, and are reported as follows:

- For all data:
  - FD results, reanalysis results, and results of the same analytes from the same sample analyzed by different analytical methods are reported.
  - Data that are R-qualified (data that were rejected because of analytical problems and/or noncompliance with QA/QC criteria during independent validation, and which are unusable) are still reported.
  - Laboratory QA/QC results, FTB data, and FB data are not included in the data set.
  - Analytes used as tracers for conceptual models are not reported.
  - Watch list data in which water-quality data for certain constituents are not representative or are of questionable representativeness are not reported. The watch list includes deep well screens for which field parameters during purging consistently fail to meet stability criteria as well as the deep well screens that show anomalous chemistry data.
  - All results are reported at all locations.

- For radionuclide data:
  - Constituents analyzed and reported for the gamma spectroscopy suite include cesium-137, cobalt-60, neptunium-237, potassium-40, and sodium-22.
  - Americium-241 and uranium-235 data from chemical separation alpha spectroscopy are reported. No gamma spectroscopy results for these analytes are presented.
  - All results are reported at all locations.

Multiple analyses of the same analyte in a sample, including dilutions and reanalyses, create redundant results. These multiple results for the same analyte have the same sample ID, analytical laboratory code, and analytical method. Validation determines the more accurate result, which is marked with a best value flag of “Y” (yes). The other results for that analyte, which were validated to be of lower quality, are assigned a best value flag of “N” (no). The best value flag is included in Appendix C.

The analytical results for radionuclides and radioactivity are voluntarily compared with the DOE Biota Concentration Guides (DOE 2002, 085637) for surface water and the Derived Concentration Technical Standard (DOE 2011, 600493) for groundwater but are not reported in Table 5.2-1 or Appendix D.

Appendix D presents each analytical result detected at a concentration greater than half the applicable screening value. Results with a best value flag of N are included in Appendix D but not discussed in the text.

Table 5.2-1 provides groundwater analytical results for specific analytical suites detected above screening values when applicable. Multiple detections are included except for FD exceedances. For example, if aluminum was detected above the screening value in both a primary sample and a FD, only the primary sample result would be recorded. If aluminum was detected above the screening value in any primary samples, all results would be shown. Forty-four groundwater analytical results reported in this PMR were detected above applicable screening values and are presented in Table 5.2-1.

Graphs in Appendix E display analyte concentration histories for Chromium Investigation monitoring group locations where the analyte was detected above the screening value at least once in the following expanded data set, which includes this PME in addition to data for the four previous monitoring group PMEs. Appendix E may include instances where the analyte data are evaluated using a higher screening value than the screening value used to evaluate previously reported analyte data. For example, the current screening value of 13.8 µg/L for perchlorate is greater than the former screening value of 4 µg/L, which was used to evaluate previously reported analyte data. If there are exceedances of the current screening value by the data reported in this PMR, the graphs depict the current analyte screening value. If there are no exceedances of current values, but at least one exceedance of the former (lower) screening value by the previously reported analytical data, the graphs depict the former lower screening value. Magenta lines indicate the PMR reporting period. Results with a best value flag of N are not included in Appendix E.

The analytical laboratory reports, including COC forms and data validation forms, are provided in Appendix F (on DVD included with this document).

5.2.1 Surface Water (Base Flow)

There are no base-flow monitoring locations included within the Chromium Investigation monitoring group.

5.2.2 Groundwater

Table 5.2-1 shows that 44 groundwater analytical results reported in this PMR were above applicable screening values. These 44 screening-value exceedances involve the following five analytes: chromium (filtered), 1,4-dioxane (unfiltered), nitrate-nitrite as nitrogen (filtered), perchlorate (filtered), and fluoride (filtered). The following section details when and where these exceedances were detected. Figure 5.2-1 shows chromium exceedances, Figure 5.2-2 shows 1,4-dioxane exceedances, Figure 5.2-3 shows nitrate-nitrite as nitrogen exceedances and Figure 5.2-4 shows perchlorate exceedances.

5.2.2.1 Perched-Intermediate Monitoring Wells

MCOI-5

At MCOI-5, chromium concentrations did not exceed the NMWQCC groundwater standard during the PMEs reported in this PMR. Historically, since 2006, chromium concentrations at MCOI-5 have ranged from non-detection (ND) to 218.0 µg/L.

At MCOI-5, 1,4-dioxane concentrations were detected over the NMED tap water screening level (screening value) of 4.59 µg/L during the May 8, 2019, sampling event with a concentration of 22.9 µg/L. Historically, from 2012 to 2018, 1,4-dioxane concentrations at MCOI-5 have ranged from 4.45 µg/L to 27.9 µg/L.

At MCOI-5, nitrate-nitrite as nitrogen concentrations were detected above the EPA MCL screening value of 10 mg/L during the January 11, 2019; May 8, 2019; and July 24, 2019, sampling events with the respective concentrations of 14.0 mg/L, 12.5 mg/L, and 11.6 mg/L. Previously, from August 2009 to May 2018, nitrate-nitrite as nitrogen concentrations at MCOI-5 have ranged from 3.63 mg/L to 16.8 mg/L.

At MCOI-5, perchlorate concentrations were detected above the NMED tap water screening level of 13.8 µg/L during the January 11, 2019; May 8, 2019; and July 24, 2019, sampling events with the respective concentrations of 213.0 µg/L, 170.0 µg/L, and 151.0 µg/L. From June 2012 to July 2018, perchlorate concentrations at MCOI-5 have ranged from 68.7 µg/L to 239 µg/L.

MCOI-6

At MCOI-6, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the January 9, 2019; May 13, 2019; July 23, 2019; and November 14, 2019, sampling events with the respective concentrations of 68.2 µg/L, 64.6 µg/L, 63.7 µg/L, and 66.5 µg/L. From February 2009 to November 2016, these concentrations have ranged from 40.9 µg/L to 86.6 µg/L.

At MCOI-6, 1,4-dioxane concentrations were detected over the NMED tap water screening level (screening value) of 4.59 µg/L during the May 13, 2019, and November 14, 2019, sampling events with the respective concentrations of 10.1 µg/L and 12.1 µg/L using the SVOC analysis. A concentration of 28.3 µg/L for the November 14, 2019, event was obtained using a low-level selected ion monitoring (SIM) method, and had a 4× dilution factor. This is the first year that the low-level method was used, and focused validation is ongoing. Historically, from May 2015 to November 2019, 1,4-dioxane concentrations at MCOI-6 have ranged from 7.39 µg/L to 28.3 µg/L.

At MCOI-6, nitrate-nitrite as nitrogen concentrations were detected above the EPA MCL screening value of 10 mg/L during the January 9, 2019; May 13, 2019; July 23, 2019; and November 14, 2019, sampling events with the respective concentrations of 12.8 mg/L, 11.1 mg/L, 12.4 mg/L, and 11.4 mg/L. From February 2013 to February 2009, nitrate-nitrite as nitrogen concentrations at MCOI-6 have ranged from 7.62 mg/L to 15.1 mg/L.

At MCOI-6, perchlorate concentrations were detected above the NMED tap water screening level of 13.8 µg/L during the January 9, 2019; May 13, 2019; July 23, 2019; and November 14, 2019, sampling events with the respective concentrations of 109.0 µg/L, 93.6 µg/L, 86.1 µg/L, and 94.9 µg/L. From February 2013 to November 2018, perchlorate concentrations at MCOI-6 have ranged from 56.3 µg/L to 124 µg/L.

SCI-2

At SCI-2, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the January 16, 2019; May 14, 2019; July 12, 2019; and the November 15, 2019, sampling events with the respective concentrations of 300.0 µg/L, 265.0 µg/L, 276.0 µg/L, and 268.0 µg/L. Historically from May 2009 to May 2019, chromium concentrations detected at SCI-2 range from 265.0 µg/L to 658.0 µg/L.

At SCI-2, 1,4-dioxane; nitrate-nitrite as nitrogen; and perchlorate concentrations did not exceed screening values during the PMEs reported in this PMR. Previous results from 2008 to 2018 show that these analytes have not exceeded screening values.

5.2.2.2 Regional Monitoring Wells

R-11

At R-11, fluoride concentrations were detected above the NMWQCC groundwater standard of 1.6 mg/L during the July 11, 2019, sampling event with a concentration of 3.02 mg/L. Previously, from August 2009 to June 2019, fluoride concentrations at R-11 have ranged from nondetection to 0.58 mg/L.

R-43 Screen 1

At R-43 screen 1, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the January 18, 2019; May 10, 2019; July 11, 2019; and November 14, 2019, sampling events with the respective concentrations of 199.0 µg/L, 197.0 µg/L, 205.0 µg/L, 222.0 µg/L, and 223.0 µg/L (FD). From June 2009 to November 2019, these concentrations have ranged from 2.35 µg/L to 223 µg/L.

Dioxane[1,4], nitrate-nitrite as nitrogen, and perchlorate concentrations were not detected at R-43 screen 1 above their respective screening values and historically have not exceeded their screening values.

R-50 Screen 1

At R-50 screen 1, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the January 15, 2019; February 20, 2019; March 14, 2019; April 29, 2019; May 9, 2019; July 17, 2019; and August 22, 2019, sampling events with the respective concentrations of 76.3 µg/L, 63.7 µg/L, 61.9 µg/L, 52.6 µg/L, 51.2 µg/L, 54.9 µg/L, and 57.4 µg/L. Historically, from May 2010 to October 2017, these concentrations have ranged from 40.5 µg/L to 150 µg/L.

Dioxane[1,4], nitrate-nitrite as nitrogen, and perchlorate concentrations were not detected at R-50 screen 1 above their respective screening values and historically have not exceeded their screening values.

R-61 Screen 1

At R-61 screen 1, perchlorate concentrations were detected above the NMED tap water screening level of 13.8 µg/L during the January 8, 2019, sampling event with a concentration of 15.7 µg/L. Historically, from August 2011 to September 2018, the perchlorate concentration has ranged from 2.96 to 16.2 µg/L.

At R-61 screen 1, chromium; 1,4-dioxane; and nitrate-nitrite as nitrogen concentrations were not detected above their screening values during the PMEs reported in this PMR.

R-62

At R-62, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the January 23, 2019; May 14, 2019; July 26, 2019; and November 12, 2019, sampling events with the respective concentrations of 311.0 µg/L, 284.0 µg/L, 270.0 µg/L, and 287.0 µg/L. Since 2012, the previous concentrations have ranged from 104 µg/L to 260 µg/L.

At R-62, 1,4-dioxane; nitrate-nitrite as nitrogen; and perchlorate concentrations were not detected above their screening values and historically have not exceeded the screening values.

5.3 Sampling Program Modifications

Starting in monitoring year 2020, tracer sampling and monthly sampling are now sampled and reported under the Semiannual Progress Report on Chromium Plume Control Interim Measure Performance.

Dioxane[1,4-] was sampled as part of the SVOC analytical suite in the 2019 IFGMP (N3B 2018, 700000). As part of the 2020 IFGMP, 1,4-dioxane was sampled using the SVOC analytical method, and at the request of NMED, the low-level SIM method to achieve greater resolution for the analyte (N3B 2019, 700451).

Annual PFAS, prometon, and sulfolane sampling were added in the 2020 IFGMP (N3B 2019, 700451) to reflect requirements for toxic pollutants under 20.6.2 NMAC. Additionally, nitrosamine samples were analyzed at a lower MDL in the 2020 IFGMP at the request of NMED.

In 2017, R-28 and R-42 were removed from the chromium investigation monitoring group, and repurposed to support the interim measure investigations and plume-center characterization.

6.0 SUMMARY AND INTERPRETATIONS

6.1 Monitoring Results

Appendix A presents the field parameter measurements associated with the sampling and analysis data reported within this PMR.

6.2 Analytical Results

Appendix C presents the analytical data associated with the sampling reported within this PMR.

6.2.1 Surface Water (Base Flow)

There are no base-flow monitoring locations included within the Chromium Investigation monitoring group.

6.2.2 Groundwater

Forty-four groundwater analytical results reported in this PMR were above applicable screening values (Table 5.2-1). For results above screening values, the types of contaminants detected and their concentrations are consistent with data reported in previous PMRs for this monitoring group, with the following exceptions.

6.2.2.1 Perched-Intermediate Monitoring Wells

The MCOI-6 1,4-dioxane concentration of 28.3 µg/L collected on November 14, 2019, was the highest observed to date. The previous maximum concentration was 23.2 µg/L.

The SCI-2 filtered chromium concentration of 265 µg/L collected on May 14, 2019, was the lowest observed to date. The previous minimum concentration was 294 µg/L.

6.2.2.2 Regional Monitoring Wells

The R-11 fluoride concentration of 3.02 mg/L collected on July 11, 2019, was the highest concentration to date. The previous maximum concentration was 0.58 mg/L.

The R-43 screen 1 filtered chromium concentration of 223 µg/L collected during the November 14, 2019, sampling event was the highest concentration to date. The previous maximum concentration was 200 µg/L.

The R-50 screen 1 filtered chromium concentration of 40.5 µg/L collected on November 19, 2019, was the lowest concentration to date. The previous minimum concentration was 49.8 µg/L.

The R-62 filtered chromium concentration of 311 µg/L collected on January 23, 2019, was the highest concentration to date. The previous maximum concentration was 277 µg/L.

6.3 Data Gaps

Table 2.1-1 summarizes the deviations from the planned monitoring scope for this PMR.

6.4 Remediation System Monitoring

Initial pumping, treatment, and injection of groundwater containing elevated levels of chromium from the aquifer beneath Mortandad and Sandia Canyons began under the interim measure (IM) in late 2016.

The IM involves pumping contaminated groundwater from the regional aquifer using extraction wells, treating the water at the surface using ion exchange to reduce the chromium concentrations to values at or below 90% of the groundwater standard (i.e., 45 µg/L) in accordance with Discharge Permit 1793, and reinjecting the treated water into the regional aquifer through a series of injection wells located along the plume periphery. The performance monitoring wells, all of which are ideally located for monitoring the performance of the IM, include R-11, R-35a, R-35b, R-50 screen 1 and screen 2, R-44 screen 1 and screen 2, R-45 screen 1 and screen 2, SIMR-2, and R-61 screen 1.To understand the chromium plume's response to IM actions, these 11 wells were sampled monthly in the 2019 IFGMP (N3B 2018, 700000) during quarters 2, 3 and 4, and reported in the "Semiannual Progress Report on Chromium Plume Control Interim Measure Performance, January–June 2019" (N3B 2019, 700581), in addition to this PMR. R-70 screen 1 and screen 2 will be sampled quarterly to monitor the plume. The monthly chromium monitoring and tracer sampling were removed from the 2020 IFGMP (N3B 2019, 700451). Monthly sampling of these wells for the 2020 monitoring year and associated results continue to be reported under the "Semiannual Progress Report on Chromium Plume Control Interim Measure Performance."

7.0 REFERENCES

The following reference list includes documents cited in this report. Parenthetical information following each reference provides the author(s), publication date, and ERID, ESHID, or EMID. This information is also included in text citations. ERIDs were assigned by the Laboratory's Associate Directorate for Environmental Management (IDs through 599999); ESHIDs were assigned by the Laboratory's Associate Directorate for Environment, Safety, and Health (IDs 600000 through 699999); and EMIDs are assigned by N3B (IDs 700000 and above). IDs are used to locate documents in N3B's Records Management System and in the Master Reference Set. The NMED Hazardous Waste Bureau and N3B maintain copies of the Master Reference Set. The set ensures that NMED has the references to review documents. The set is updated when new references are cited in documents.

[a] gpm = Gallons per minute.

[b] Quarterly sampling event.

[c] SCI-1 is on the watch list because volume of water is limited and the field parameters do not stabilize. Samples are collected regardless of field parameter stability.

[d] Monthly sampling event.

[e] S1 = Screen 1.

[f] S2 = Screen 2.

[g] n/a = Not applicable.

Table 2.1-1
Chromium Investigation Monitoring Group PME Observations and Deviations

Sampling Event		Watershed	Monitoring Location	Observation/Deviation	Cause	Comments
Monitoring Year	Quarter					
Quarterly Sampling						
2019	2	Mortandad	MCOI-5	1.18 CVs[a] purged	Sampled per attachment 15; at one casing volume and drop pipe purged regardless of stability	None
			MCOI-6	3.11 CVs purged	None	None
			R-13	3.01 CVs purged	None	None
			R-15	3.81 CVs purged	An extra 0.81 CVs purged	Extra CVs purged to allow dissolved oxygen to stabilize. NMED began sampling at 0953, causing the flow of the field parameter multimeter to be restricted and altering dissolved oxygen.
			R-33 S1[b]	3.09 CVs purged	None	None
			R-33 S2[c]	3.34 CVs purged	None	None

			R-35a	3.07 CVs purged	None	None
			R-35b	4.44 CVs purged	An extra 1.44 CVs purged	Extra CCVs purged to allow pH and dissolved oxygen to stabilize.
			R-36	3.20 CVs purged	None	None
			R-43 S1	3.05 CVs purged	None	None
			R-43 S2	3.14 CVs purged	None	None
			R-67	3.09 CVs purged	None	None

Table 2.1-1 (continued)

Sampling Event		Watershed	Monitoring Location	Observation/Deviation	Cause	Comments
Monitoring Year	Quarter					
2020	1	Mortandad	R-70 S1	Canceled	Mechanical	None
			R-70 S2	Canceled	Mechanical	None
			MCOI-5	Limited analytical data will be available for this site.	A prioritized suite was collected.	A prioritized suite consisting only of PFAS was collected because of limited available water.
All PMEs in this PMR	All PMEs in this PMR	Mortandad and Sandia	All sites where SVOCs are analyzed	The 2019 IFGMP and 2020 IFGMP Table B-4.1-1 (N3B 2019, 700451) specifies a requirement to analyze methylphenol[4-], CAS[d] 106-44-5 as part of the SVOC analytical suite by the analytical method SW-846:8270D. Instead, methylphenol[3-,4-] CAS 65794-96-9 is analyzed as part of the SVOC analytical suite by the analytical method SW-846:8270D.	Methylphenol[3-], m-cresol, CAS 108-39-4, and methylphenol[4-], p-cresol CAS 106-44-5, are not independently quantified by SW-846:8270D. The two compounds co-elute and methylphenol[3-,4-], m,p-cresols CAS 65794-96-9 is analyzed by SW-846:8270D. The result for each analyte is a combined concentration. GELC's catalog of services includes m,p-cresols and does not include m-cresol or p-cresol. GELC's certificate of analysis identifies m,p-cresols CAS 65794-96-9.	None
			All sites where SVOCs are analyzed	The 2019 IFGMP and 2020 IFGMP Table B-4.1-1 (N3B 2019, 700451) specifies a requirement to analyze azobenzene, CAS 103-33-3 as part of the SVOC analytical suite by the analytical method SW-846:8270D. Instead, diphenylhydrazine[1,2-], CAS 122-66-7 is analyzed as part of the SVOC analytical suite by the analytical method SW846:8270D.	Diphenylhydrazine[1,2-] CAS 122-66-7 decomposes and cannot be separated from azobenzene CAS 103-33-3 using the analytical method SW846:8270D.	None

[a] MY = Monitoring year.

[b] Quarterly sampling event.

[c] UF = Unfiltered.

[d] NMED A1 TAP SCRN LVL = New Mexico Environment Department screening level for tap water.

[e] F = Filtered.

[f] NM GW STD = New Mexico Water Quality Control Commission groundwater standard.

[g] Analyte was measured using the low-level SIM method, and focused validation is ongoing.

[h] S1 = Screen 1.

Appendix A

Field Parameter Results, Including Results from Previous Four Monitoring Events if Available

Notes: Issues with conductivity readings, instrumentation later recalibrated to factory settings. Values are approximately double for the following wells and dates: R-44 S1 and S2, 9/12/2019; R-45 S1 and S2, 8/22/2019; R-50 S21, 08/22/2019; SIMR-2, 08/21/2019.

[a] WG = Groundwater.

[b] SU = Standard unit.

[c] NTU = Nephelometric turbidity unit.

[d] S1 = Screen 1.

[e] S2 = Screen 2.

Appendix B

Groundwater-Elevation Measurements
(on CD included with this document)

Appendix C

Analytical Chemistry Results, Including Results from Previous Four Monitoring Events if Available

The following pages provide lists of (1) acronyms, abbreviations, symbols, and various analytical codes; (2) analytical laboratory qualifier codes; and (3) secondary validation flag codes (4) background value sources that may be used in Appendix C. Please note that these are comprehensive lists, and this periodic monitoring report may not include all of the terms in the lists.

Acronyms and Abbreviations

Acronym, Abbreviation, or Symbol	Description
Miscellaneous	
%	percent
%D	percent difference
%R	percent recovery
%RSD	percent relative standard deviation
<	Based on qualifiers, the result was a nondetection.
—	none
4,4'-DDD	4,4'-dichlorodiphenyldichloroethane
4,4'-DDT	4,4'-dichlorodiphenyltrichloroethane
BHC	benzene hexachloride
CB	chlorinated biphenyl
CCB	continuing calibration blank
CCV	continuing calibration verification
CLP	Contract Laboratory Program
CRDL	contract-required detection limit
CRI	CDRL check standard
DCG	Derived Concentration Guide (DOE)
DDE	dichlorodiphenyldichloroethylene
DNX	dinitroso-RDX
DOE	Department of Energy (U.S.)
DQO	data quality objective
EPA	Environmental Protection Agency (U.S.)
GC	gas chromatography
GC/MS	gas chromatography/mass spectrometry
GFAA	graphite furnace atomic absorption
GFPC	gas-flow proportional counter
GW	groundwater
HH OO	Human Health—Organism Only (NMWQCC standard)
HMX	1,3,5,7-tetranitro-1,3,5,7-tetrazocine
HPLC	high-pressure liquid chromatography
ICAL	initial calibration
ICPAES	inductively coupled plasma atomic (optical) emission spectroscopy
ICV	initial calibration verification
IDL	instrument detection limit

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Miscellaneous (continued)	
IS	internal standard
LAL	lower acceptance limit
LANL	Los Alamos National Laboratory
LCS	laboratory control sample
LLEE	low-level electrolytic extraction
LOC	level of chlorination
LSC	liquid scintillation counting
Lvl	level
MCL	maximum contaminant level (EPA)
MDA	minimum detectable activity
MDC	minimum detectable concentration
MDL	method detection limit
MNX	mononitroso-RDX
MS	matrix spike
MSD	matrix spike duplicate
N3B	Newport News Nuclear BWXT-Los Alamos, LLC
NM	New Mexico
NMED	New Mexico Environment Department
NMWQCC	New Mexico Water Quality Control Commission
OPR	ongoing precision recovery
PCB	polychlorinated biphenyl
PCDD	polychlorinated dibenzo-p-dioxin
PCDF	polychlorinated dibenzofuran
PQL	practical quantitation limit
Prelim	preliminary
QC	quality control
RDX	Royal Demolition Explosive
RF	response factor
RL	reporting limit
RPD	relative percent difference
RRF	relative response factor
RRT	relative retention time
RT	retention time
Scr	screening
SDG	sample delivery group
SMO	Sample Management Office
SSC	suspended sediment concentration
SU	standard unit

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Miscellaneous (continued)	
TCDD	tetrachlorodibenzo-p-dioxin
TCDF	tetrachlorodibenzofuran
TDS	total dissolved solids
TPH-DRO	total petroleum hydrocarbons—diesel range organics
TNX	trinitroso-RDX
TPU	total propagated uncertainty
UAL	upper acceptance limit
Field Matrix Codes	
W	water
WG	groundwater
WM	snowmelt
WP	persistent flow
WS	base flow
WT	storm runoff
Field Prep Codes	
F	filtered
UF	unfiltered
Lab Sample Type Codes	
CS	client sample
DL	dilution
DUP	duplicate
INIT	initial
RE	reanalysis
REDL	reanalysis dilution
REDP	reanalysis duplicate
RI	reissue
TRP	triplicate
Field QC Type Codes	
EQB	equipment rinsate blank
FB	field blank
FD	field duplicate
FR	field rinsate
FS	field split
FTB	field trip blank
FTR	field triplicate
INB	equipment blank taken during installation and not associated with a sampling event
ITB	trip blank taken during installation and not associated with a sampling event
NA	not applicable

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Field QC Type Codes (continued)	
PEB	performance evaluation blank
PEK	performance evaluation known
REG	regular
RES	resample
SS	special sampling event, data unique
SS-EQB	equipment blank of special sampling event, data unique
SS-FB	field blank of special sampling event, data unique
SS-FD	field duplicate of special sampling event, data unique
SS-FTB	field trip blank of special sampling event, data unique
Analytical Suite Codes	
DIOX/FUR, Diox/Fur	dioxins and furans
DRO	diesel range organics
Geninorg, GENINORG, General Chemistry	general inorganics
GRO	gasoline range organics
HERB	herbicides
HEXP	high explosives
INORGANIC	inorganics
ISOTOPE, Isotope	isotope ratios
LCMS/MS	liquid chromatography mass spectrometry/mass spectrometry
METALS, Metals	metals
PEST/PCB, PESTPCB	pesticides and PCBs
RAD, Rad	radiochemistry
SVOC, SVOA	semivolatile organic compounds
VOC, VOA	volatile organic compounds
Detect Flag and Best Value Flag Codes	
N	no
Y	yes
Lab Codes	
ALTC	Alta Analytical Laboratory, Inc., San Diego, CA
ARSL	American Radiation Services, Inc.
CFA	Cape Fear Analytical, LLC, Wilmington, NC, Division of the GEL Group, Inc., Charleston SC
C-INC	Isotope and Nuclear Chemistry Division (LANL)
COAST	Coastal Science Laboratories, Austin, TX
CST	Chemical Sciences and Technology Division (LANL)
EES6	Hydrology, Geochemistry, and Geology Group (LANL)
ESE	Environmental Sciences & Engineering, Inc., Gainesville, FL
FLD	measurement taken in field

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Lab Codes (continued)	
GELC	General Engineering Laboratories, LLC, Division of the GEL Group, Inc., Charleston, SC (used in Environmental Information Management data base)
GEO	Geochron Laboratories, Boston, MA
HENV	Health and Environmental Laboratory (Johnson Controls, Northern New Mexico)
HUFFMAN	Huffman Laboratories, Inc., Golden, CO
KA	KEMRON Environmental Services, Inc., Vienna, VA
LVLI	Lionville Laboratory, Inc., Philadelphia, PA
PARA	Paragon Analytics, Inc., Salt Lake City, UT
PEC	Pacific Ecorisk Laboratories, Fairfield, CA
QESL	Quanterra Environmental Services, St. Louis, MO
QST	QST Environmental, Newberry, FL
RECRAP	RECRA Labnet, Lionville, PA
RFWC	Roy F. Weston, Inc., West Chester, PA
SGSW	Paradigm Analytical Laboratories, Inc., Wilmington, NC
SILENS	Stable Isotope Laboratory, Woods Hole, MA
STL2, STR	Severn Trent Laboratories, Inc., Richland, WA (historical)
STLA	Severn Trent Laboratories, Inc., Los Angeles, CA
STSL	Severn Trent Laboratories, Inc., St. Louis, MO
SwRI	Southwest Research Institute, San Antonio, TX
UAZ	University of Arizona, Tucson
UIL	University of Illinois, Urbana-Champaign
UMTL	University of Miami Tritium Lab

Note: A combination of analytical laboratory qualifier codes means that several codes apply.

Analytical Laboratory Qualifiers

Code	Description
*	(Inorganic)—Duplicate analysis (relative percent difference [RPD]) not within control limits.
B	(Organic)—Analyte was present in the blank and the sample. (Inorganic) —Reported value was obtained from a reading that was less than the contract-required detection limit (CRDL) but greater than or equal to the instrument detection limit (IDL).
BJ	See B code and see J code.
BJP	See B code, see J code, and see P code.
BPX	(B) (Organic)—This analyte was detected in the associated laboratory method blank and the sample. (B) (Inorganic)—The result for this analyte was greater than the IDL but less than the CRDL. (P) (Pesticides/PCBs)—The quantitative results for this analyte between the primary and secondary gas chromatography (GC) columns were greater than 25% difference. (P) (SW-846 EPA Method 8310, High-Pressure Liquid Chromatography, [HPLC] Results)—The quantitative results for this analyte between the primary and secondary HPLC columns or primary and secondary HPLC detectors were greater than 40% difference. (X) (Organic/Inorganic)—The result for this analyte should be regarded as not detected.
D	The result for this analyte was reported from a dilution.
DJ	See D code and see J code.
DNA	Did not analyze because equipment was broken.
E	(Organic) Analyte exceeded the concentration range. (Inorganic) The serial dilution was exceeded.
E*	See E code and see * code.
EJ	See E code and see J code.
EJ*	See E code, see J code, and see * code.
EJN	(E) (Organic)—The result for this analyte exceeded the upper range of the instrument initial calibration curve. (E) (Inorganic) (inductively coupled plasma atomic [optical] emission spectroscopy [ICPAES])—The result for this analyte in the serial dilution analysis was outside acceptance criteria. (E) (Inorganic) (graphite furnace atomic absorption [GFAA])—The result for this analyte failed one or more Control Laboratory Program (CLP) acceptance criteria as explained in the case narrative. (J) (Organic/General Inorganics)—The result for this analyte was greater than the method detection limit (MDL) but less than the practical quantitation limit (PQL). (N) (Organic)—The reported analyte is a tentatively identified compound (TIC). (N) (Inorganic)—The result for this analyte in the matrix spike (MS) sample was outside acceptance criteria.
EN	See E code and see N code.
EN*	(E) (Organic)—The result for this analyte exceeded the upper range of the instrument initial calibration curve. (E) (Inorganic) (ICPAES)—The result for this analyte in the serial dilution analysis was outside acceptance criteria. (E) (Inorganic) (GFAA)—The result for this analyte failed one or more CLP acceptance criteria as explained in the case narrative. (N) (Organic)—The reported analyte is a TIC. (N) (Inorganic)—The result for this analyte in the MS sample was outside acceptance criteria. * (Inorganic)—The result for this analyte in the laboratory replicate analysis was outside acceptance criteria.
H	(Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded.

Analytical Laboratory Qualifiers (continued)

Code	Description
H*	(H) (Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded. * (Organic) and (Inorganic)—The result for this analyte in the laboratory control sample analysis was outside acceptance criteria.
HJ	See H code and see J code.
HJ*	(H) (Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded. (J) (Organic/General Inorganics)—The result for this analyte was greater than the MDL but less than the PQL. * (Inorganic)—The result for this analyte in the laboratory replicate analysis was outside acceptance criteria.
INS	(d15N)—The d15N of nitrate is a signature of the nitrate present in a sample. Therefore, nitrate has to be present to have a signature. A d15N value cannot be given to a blank because the blank does not have nitrate. This is different from most analytical methods, where a blank is run with the designator “nondetect” or “detected, but below detection limit.”
J	(Inorganic)—The associated numerical value is an estimated quantity. (Organic)—The associated numerical value is an estimated quantity.
J*	See J code and see * code.
JB	See J code and see B code
JN	See J code and see N code.
JN*	See J code, see N code, and see * code.
JP	See J code and see P code.
JQ	See J code and see Q code.
N	(Inorganic)—Spiked sample recovery was not within control limits.
N*	See N code and see * code.
N*E	See N code, see * code, and see E code.
NE	See N code and see E code.
P	Percent difference between the results on the two columns during the analysis differed by more than 40%.
PJ	See P code and see J code.
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or data exception report.
U	The material was analyzed for but was not detected above the level of the associated numeric value.
U*	See U code and see * code.
UD	See U code and see D code.
UE	See U code and see E code.
UE*	See U code, see E code, and see * code.
UEN	See U code, see E code, and see N code.
UH	See U code and see H code.

Analytical Laboratory Qualifiers (continued)

Code	Description
UH*	(U) (Organic/Inorganic)—The result for this analyte was not detected at the specified reporting limit. (H) (Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded. * (Inorganic)—The result for this analyte in the laboratory replicate analysis was outside acceptance criteria.
UI	(Rad) Gamma spectroscopy result should be regarded as an uncertain identification.
UN	EPA flag (Inorganic)—Compound was analyzed for but was not detected. Spiked sample recovery was not within control limits.
UN*	EPA flag (Inorganic)—See U code, see N code, and see * code.
UUI	(Rad) Gamma spectroscopy result should be regarded as an uncertain identification, and the analytical lab assigned these gamma spectroscopy results as not detected.
X	Consult case narrative, data summary package, or project manager concerning the qualifier.

Validation Qualifiers

Code	Description
A	The contractually required supporting documentation for this datum is absent.
I	The calculated sums are considered incomplete because of the lack of one or more congener results.
J	The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual.
J-	The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual with a potential negative bias.
J+	The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual with a potential positive bias.
JN-	Presumptive evidence of the presence of the material is at an estimated quantity with a suspected negative bias.
JN+	Presumptive evidence of the presence of the material is at an estimated quantity with a suspected positive bias.
N	There is presumptive evidence of the presence of the material.
NJ	(Organic) Analyte has been tentatively identified, and the associated numerical value is estimated based upon a 1:1 response factor to the nearest eluting internal standard.
NQ	No validation qualifier flag is associated with this result, and the analyte is classified as detected.
PM	Manual review of raw data is recommended to determine if the observed noncompliances with quality acceptance criteria adversely impact data use.
R	The reported sample result is classified as rejected because of serious noncompliances regarding quality control (QC) acceptance criteria. The presence or absence of the analyte cannot be verified based on routine validation alone.
U	The analyte is classified as not detected.
UJ	The analyte is classified as not detected, with an expectation that the reported result is more uncertain than usual.

Background Values

Symbol	Background Values
—	No background values available
*i	Intermediate 95% background level reported in the "Groundwater Background Investigation Report, Revision 5" (LANL 2016, 601920)
*r	Regional 95% background level reported in the "Groundwater Background Investigation Report, Revision 5" (LANL 2016, 601920)

Note: Background values in Table C-1 are upper tolerance limits reported in the "Groundwater Background Investigation Report, Revision 5" (LANL 2016, 601920) unless otherwise noted.

REFERENCE

The following reference list includes documents cited in this appendix. Parenthetical information following each reference provides the author(s), publication date, and ERID, ESHID, or EMID. This information is also included in text citations. ERIDs were assigned by Los Alamos National Laboratory (LANL) Associate Directorate for Environmental Management (IDs through 599999); ESHIDs were assigned by the Laboratory's Associate Directorate for Environment, Safety, and Health (IDs 600000 through 699999); and EMIDs are assigned by N3B (IDs 700000 and above). IDs are used to locate documents in N3B's Records Management System and in the Master Reference Set. The New Mexico Environment Department (NMED) Hazardous Waste Bureau and N3B maintain copies of the Master Reference Set. The set ensures that NMED has the references to review documents. The set is updated when new references are cited in documents.

LANL (Los Alamos National Laboratory), October 27, 2016. "Groundwater Background Investigation Report, Revision 5," Los Alamos National Laboratory document LA-UR-16-27907, Los Alamos, New Mexico. (LANL 2016, 601920)

Table C-1 Analytical Results from the Periodic Monitoring Event Reported in this Periodic Monitoring Report
