[a] F = Filtered.

[b] INIT = Primary sample.

[c] REG = Regular sample.

[d] Y = Yes.

[e] — = None.

[f] NQ = No validation qualifier flag is associated with this result, and the analyte is classified as detected.

[g] GELC = General Engineering Laboratories, LLC, Charleston, SC.

[h] EPA MCL = U.S. Environmental Protection Agency maximum contaminant level.

[i] NM GW STD = New Mexico Water Quality Control Commission groundwater standard.

[j] LCMS/MS = Liquid chromatography mass spectrometry/mass spectrometry.

[k] NMED A1 TAP SCRN LVL = New Mexico Environment Department screening level for tap water.

[l] UF = Unfiltered.

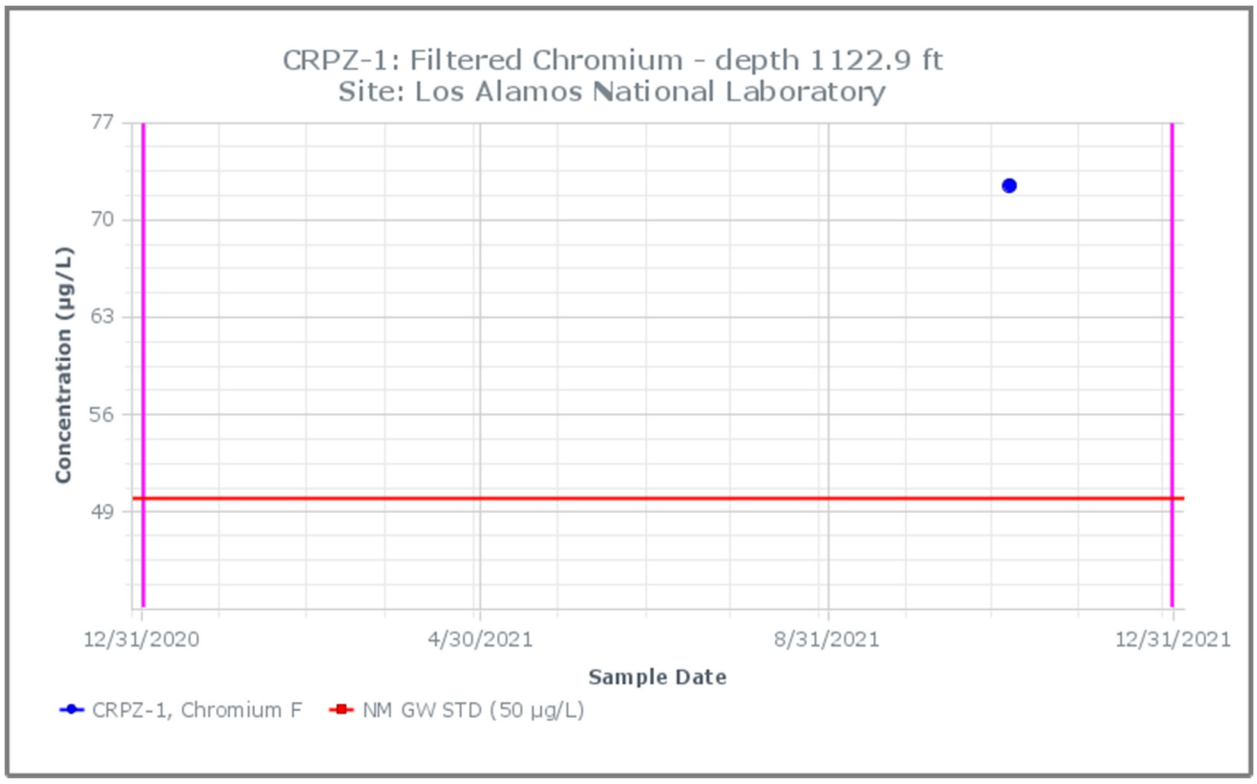
[m] FD = Field duplicate.

[n] S1 = Screen 1.

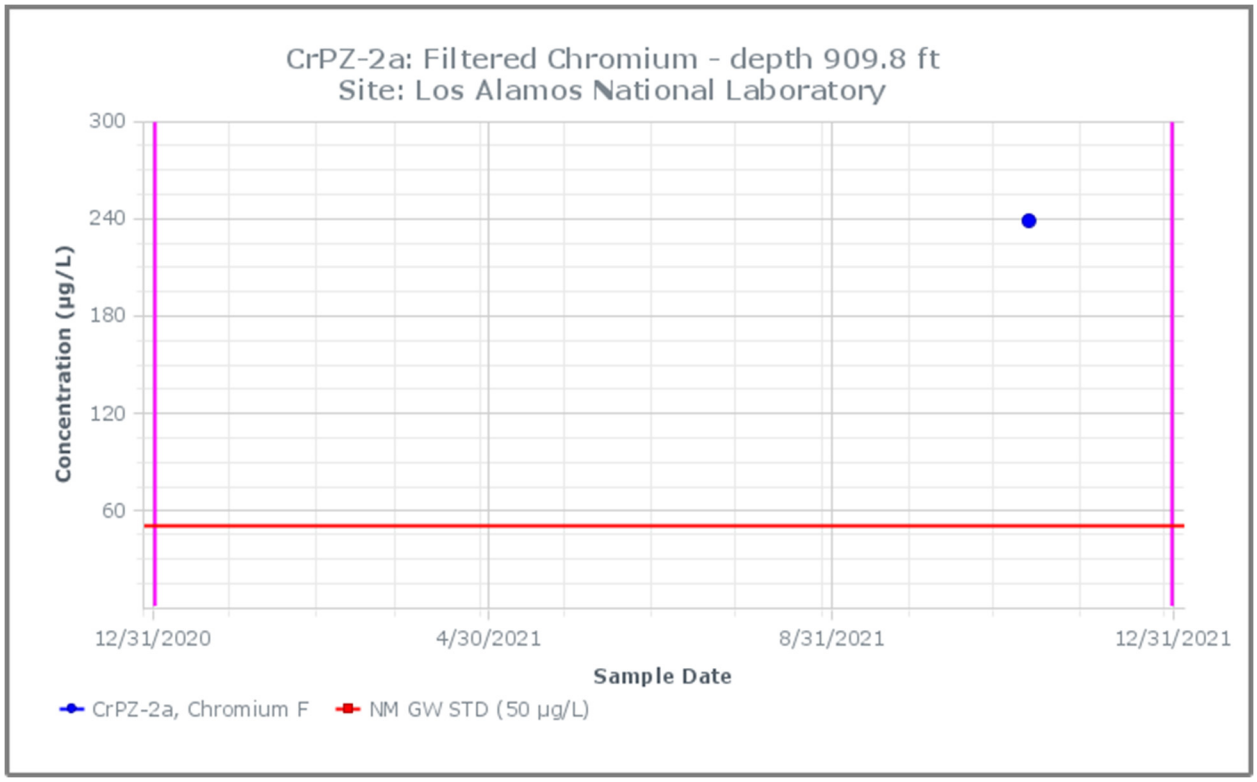
[o] S2 = Screen 2.

[p] J = The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual..

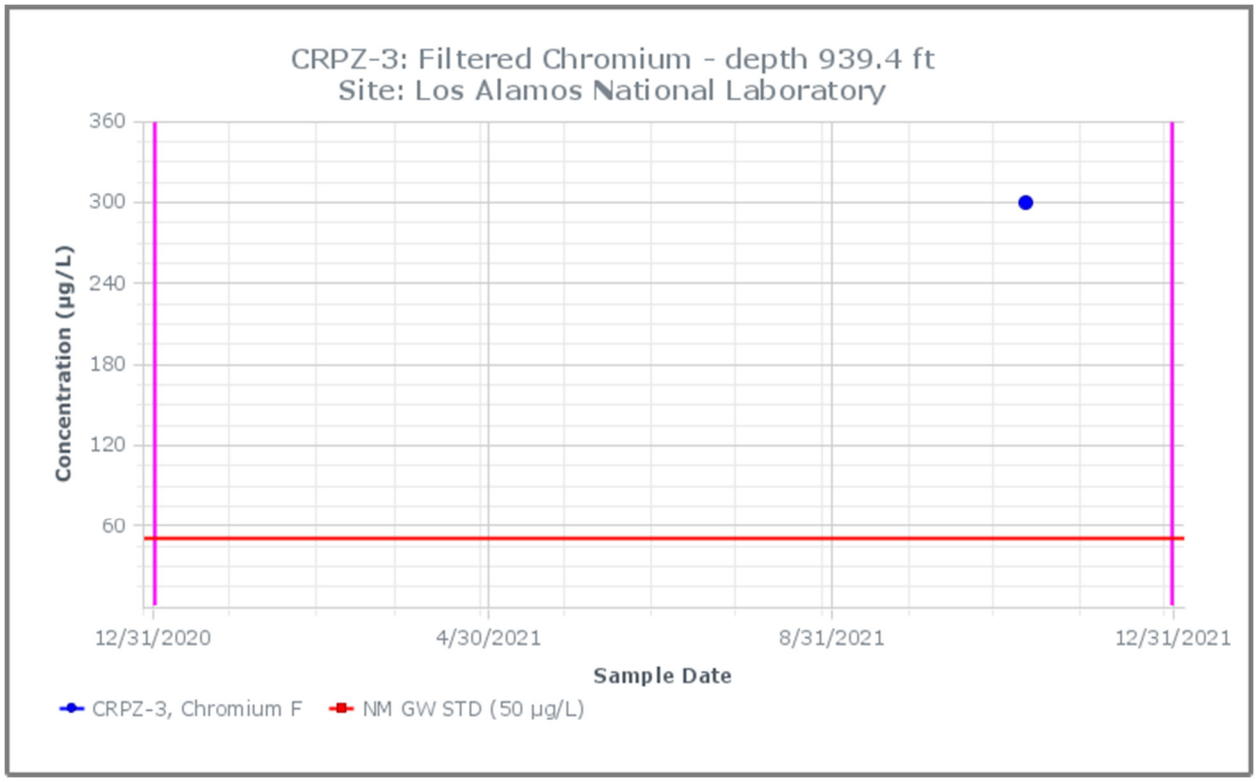
[q] PE12e = The MS/MSD percent recovery was greater than 10% but less than 75%.



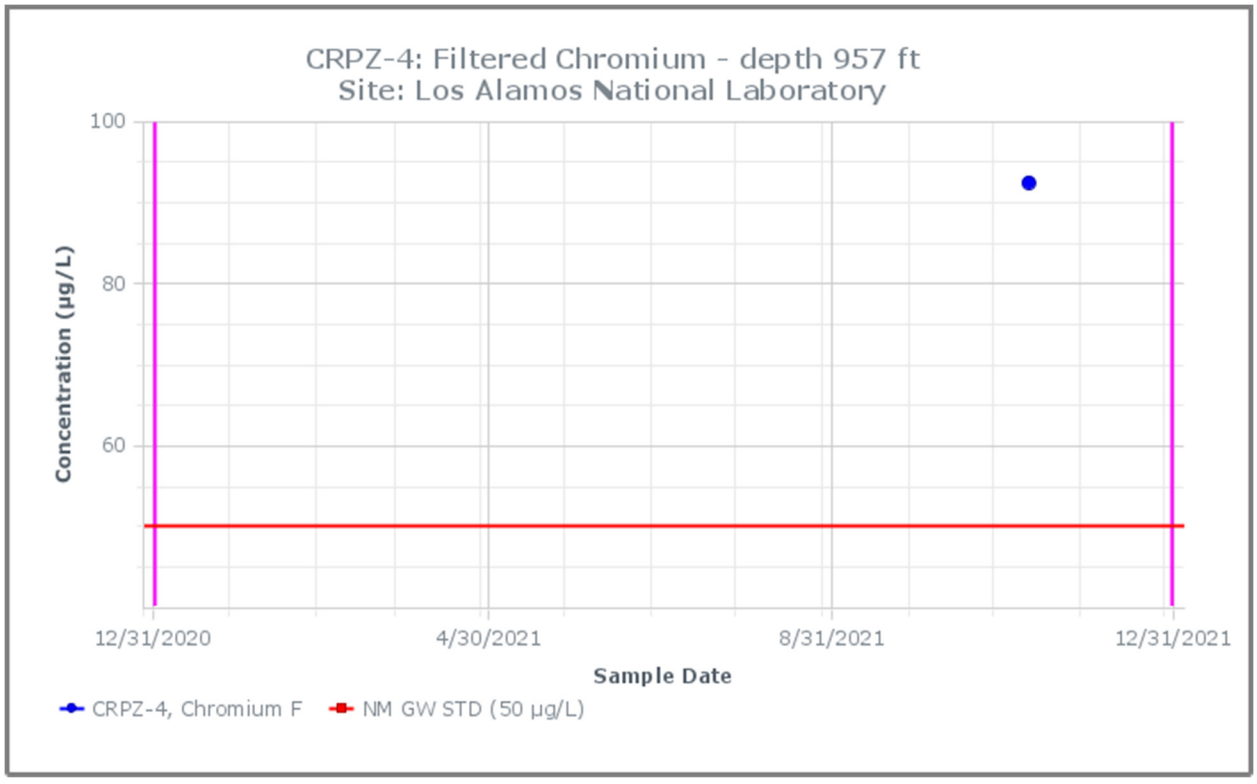
[r] J- = The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual with a potential negative bias.



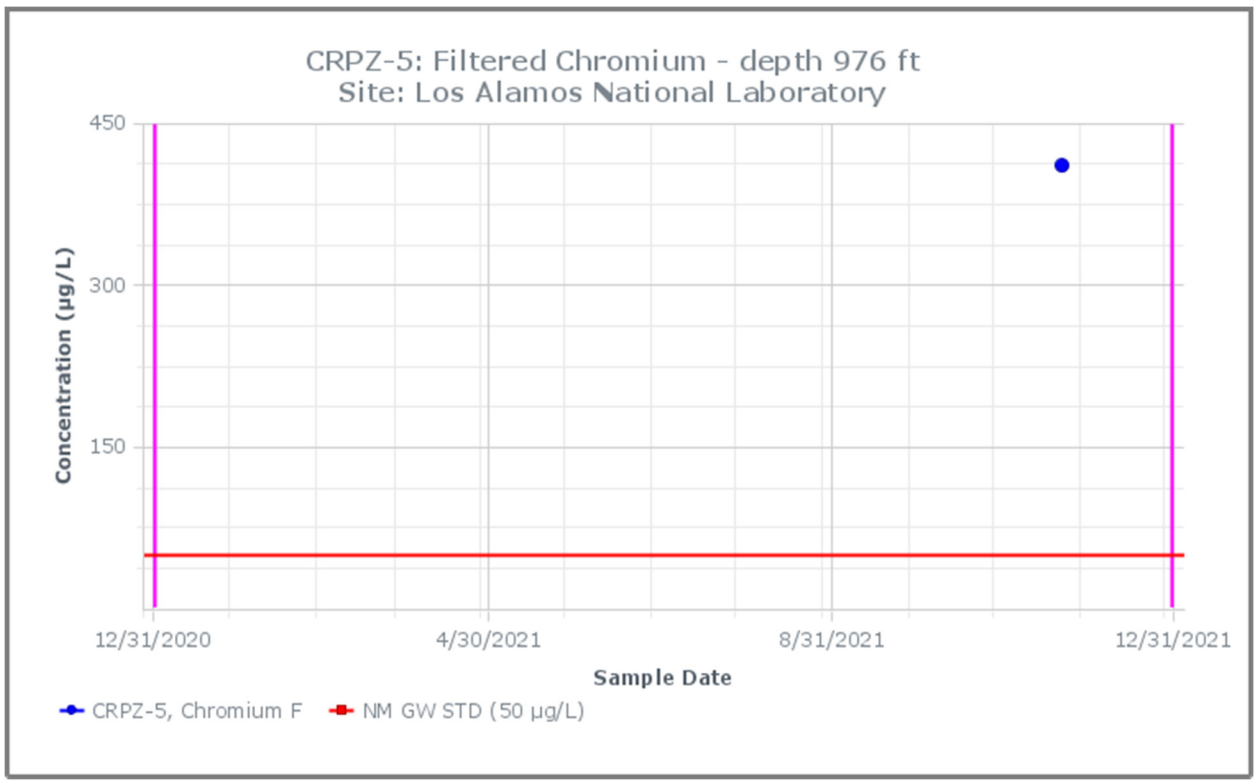
[s] PE9c = The sample temperature was >6°C, or the sample preservation criteria was not met, upon receipt at the laboratory.



Appendix E



Analytical Chemistry Graphs of Results with Screening Value Exceedances



Note: The magenta vertical lines represent the period being reported in this periodic monitoring report.

Response to the New Mexico Environment Department's Review of the 2022 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds (May 2022), Los Alamos National Laboratory, EPA ID#NM0890010515, HWB-LANL-22-035 Dated May 24, 2023

INTRODUCTION

To facilitate review of this response, the New Mexico Environment Department's (NMED's) comments are included verbatim. The U.S. Department of Energy (DOE) Environmental Management Los Alamos Field Office responses follow each NMED comment.

COMMENTS

NMED Comment

1. *Results for PFAS were not reported in Table C.1 or Table C.2 for all locations within the chromium investigation monitoring group, with the exception being R-70 S1 and R-70 S2. Please provide data for PFAS collected at locations MCOI-6, R-1, SCI-1, SCI-2, R-11, R-13, R-15, R-33 S1, R-33 S2, R-35a, R-35b, R-36, R-43 S1, R-43 S2, R-44 S1, R-44 S2, R-45 S1, R-45 S2, R-50 S1, R-50 S2, R-61 S1, R-62, R-67 and SIMR-2.*

DOE Response

1. Per- and polyfluoroalkyl substances (PFAS) are sampled annually in the first quarter of the monitoring year (MY). The PFAS results for MY 2021 are therefore included in the "2021 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon and Sandia Canyon Watersheds" (N3B 2021, 701462). Additionally, in MY 2022 PFAS were not collected at the wells listed in NMED's comment. PFAS sampling was not required as indicated by PFAS sampling criteria in Appendix C, p. C-2, of the MY 2022 Interim Facility-Wide Groundwater Monitoring Plan (IFGMP), Revision 1 (N3B 2021, 701672), which states "At locations where two rounds of PFAS sampling were successfully performed and no New Mexico Water Quality Control Commission (NMWQCC) PFAS regulatory standard was exceeded, no additional sampling for PFAS will occur in MY 2022." Because PFAS were not collected at the locations listed above, there are no results to report in Table C-1, except for R-70 screen 1 and R-70 screen 2. Furthermore, if an analyte is not collected during the periodic monitoring event (PME), corresponding historical analytes are not reported in Table C-2.

NMED Comment

2. *Results for Low-Level Tritium were not reported in Table C.1 or in Table C.2 for locations SCI-1, R-1, R-13, R-15, R-33 S1 and R-33 S2. Additionally, only one sampling event was reported for the following locations requiring semiannual sampling frequency: R-11, R-35a, R-35b, R-36, R-43 S1, R-43 S2, R-67 and SIMR-2. Finally, results were not included for Quarter 1 of Monitoring Year 2022 (with PME Field Sampling dates 10/12/2021–10/26/2021, 11/02/2021–11/22/2021, or 12/07/2021–*

12/21/2021) for the following locations: R-44 S1, R-44 S2, R-45 S1, R-45 S2, R-50 S1, R-50 S2, R-61, R-62, R-70 S1 and R-70 S2. Please provide data for Low-Level Tritium when it is available.

DOE Response

2. Per the MY 2022 IFGMP, Revision 1, 29 locations were planned for low-level tritium sampling. The samples were sent to ARS Aleut Analytical, LLC (ARSL), formerly called American Radiation Services, Inc., in Port Allen, Louisiana, for analysis.

   ARSL is the only laboratory accredited by the DOE Consolidated Audit Program - Accreditation Program for use by the DOE community to perform low-level tritium analyses. The demand for accredited low-level tritium analyses has exceeded ARSL's ability to provide analytical services in a timely manner. Fifty-six low-level tritium results for locations CrPZ-1, CrPZ-2a, CrPZ-3, CrPZ-4, CrPZ-5, R-11, R-35a, R-35b, R-36, R-43 screen 1, R-43 screen 2, R-44 screen 1, R-44 screen 2, R-45 screen 1, R-45 screen 2, R-50 screen 1, R-50 screen 2, R-61 screen 1, R-62, R-67, R-70 screen 1, R-70 screen 2, and SIMR-2 were uploaded 122 to 187 days after sampling and were available at the time of the 2022 Chromium Investigation monitoring group periodic monitoring report (PMR) submittal on May 31, 2022 (N3B 2022, 702093). These 56 results were included in Appendix C.

   Additional low-level tritium results for these 23 locations and the remaining 6 locations (29 regular and 2 field duplicate low-level tritium results, for a total of 31 results), were uploaded to Intellus between 281 and 293 days after sampling and were included in the 2023 Chromium Investigation monitoring group PMR, Appendix C, Table C-2, which was submitted to NMED on May 31, 2023. In addition, the results are included on the CD of the revised report.

NMED Comment

3. Results for PCBs were not reported in Table C.1 or Table C.2 for sampling location SCI-1. Please provide the biennial PCB data collected for this location.

DOE Response

3. Polychlorinated biphenyl (PCB) samples were not collected at SCI-1 during MY 2022 quarter 1 sampling because of limited water. As stated in Table 2.1-1 of the 2022 annual PMR for the Chromium Investigation monitoring group, a prioritized sampling suite was collected. Per Table 1.11-1 of the MY 2022 IFGMP, Revision 1, this suite consisted of metals, general inorganics, volatile organic compounds, and semivolatile organic compounds. Because PCBs were not collected as part of the prioritized sampling, there are no results to report in Table C-1. Furthermore, if an analyte is not collected during the PME, corresponding historical analytes are not reported in Table C-2.

   Pursuant to section 1.11 of the MY 2022 IFGMP, Revision 1, locations that are dry or that do not have adequate water for sampling during the scheduled sampling campaign will be sampled during the next scheduled sampling event for those locations. Locations that are consistently dry from year to year will be removed from the IFGMP.

NMED Comment

4. Section 6.4, Remediation System Monitoring*, states that "Tracer sampling data associated with the IM continue to be reported under the progress reports for the chromium plume control IM." However,*

after evaluating Appendix A (Analytical Water Quality Data Collected under the Interim Facility-Wide Groundwater Monitoring Plan) of the Annual Progress Report on Chromium Plume Control Interim Measure Performance, July 2021 through March 2022 *(Annual Progress Report), many of the tracer sampling did not occur following the requirements. The* Interim Facility-Wide Groundwater Monitoring Plan for the 2021 Monitoring Year, October 2020-September 2021, Revision 1 *(MY 2021 IFGMP) Table 1.7-4 (Analytes, Field Preparation, and Analytical Methods for Tracer Samples Collected under the IFGMP) provides the specific analytes required for each analytical suite for naphthalene sulfonate tracers, sodium perrhenate tracer, and deuterated water tracer. Table 3.4-1 (Interim Monitoring Plan for Chromium Investigation Monitoring Group) of the MY 2021 IFGMP states that sampling will occur for the tracers listed above monthly at multiple locations. This required monthly sampling was not conducted for most of the locations. Provide the monthly naphthalene sulfonate tracer results for R-11, R-35a, R-35b, R-45 S1, R-45 S2, R-70 S1, R-70 S2 and SIMR-2. Provide the monthly sodium perrhenate tracer results for R-11, R-35a, R-35b, R-44 S1, R-44 S2, R-45 S1, R-45 S2, R-70 S1 and R-70 S2. Provide the monthly deuterated water tracer results for R-11, R-35a, R-35b, R-45 S1, R-45 S2, R-70 S1 and R-70 S2. If the sampling was not conducted monthly, revise the text and Table 2.1-1 (Chromium Investigation Monitoring Group PME Observations and Deviations) to accurately reflect the sampling conducted.*

DOE Response

4. All tracer analyses at all wells listed in this comment are now provided in Tables C-1 and C-2 of the revised report. Text in section 6.4, “Tracer sampling data associated with the IM continue to be reported under the progress reports for the chromium plume control IM,” has been removed. Because not all tracer data are included in the interim measures (IM) progress report, all IFGMP-related tracer data are presented in Tables C-1 and C-2. Additionally, the bullet stating “Tracers used for conceptual models are not reported” has been removed from section 5.2.
