Mr. Rick Shean
Designated Agency Manager
Hazardous Waste Bureau
New Mexico Environment Department
2905 Rodeo Park Drive East, Building 1
Santa Fe, NM 87505-6313

Subject: Submittal of the 2022 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Revision 1, and the Response to the New Mexico Environment Department Review of the 2022 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group

Dear Mr. Shean:

Enclosed please find two hard copies with electronic files of the "2022 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, Revision 1." Enclosure 1 includes an electronic copy of a redline strikeout version of the report that incorporates all changes made in response to the New Mexico Environment Department's (NMED's) review comments dated May 24, 2023 (Enclosure 2).

This report is submitted in accordance with Appendix E, Section IV, of the June 2016 Compliance Order on Consent, as modified on February 27, 2017.

If you have any questions, please contact Amanda White at (505) 309-1366 (amanda.white@em-la.doe.gov) or Hai Shen at (505) 709-7600 (hai.shen@em.doe.gov).

Sincerely,

ARTURO DURAN

2022 Annual Periodic Monitoring Report for the Chromium Investigation Monitoring Group, Mortandad Canyon and Sandia Canyon Watersheds, Revision 1

N3B Los Alamos

Newport News Nuclear BWXT-Los Alamos, LLC (N3B), under the U.S. Department of Energy Office of Environmental Management Contract No. 89303318CEM000007 (the Los Alamos Legacy Cleanup Contract), has prepared this document pursuant to the Compliance Order on Consent, signed June 24, 2016. The Compliance Order on Consent contains requirements for the investigation and cleanup, including corrective action, of contamination at Los Alamos National Laboratory. The U.S. government has rights to use, reproduce, and distribute this document. The public may copy and use this document without charge, provided that this notice and any statement of authorship are reproduced on all copies.

EXECUTIVE SUMMARY

This annual periodic monitoring report (PMR) presents results for the Chromium Investigation monitoring group of the Newport News Nuclear BWXT-Los Alamos, LLC, groundwater monitoring program that have not been previously reported. All monitoring work reported in this PMR was conducted pursuant to the "Interim Facility-Wide Groundwater Monitoring Plan for the 2021 Monitoring Year, October 2020–September 2021, Revision 1" (2021 IFGMP) and the "Interim Facility-Wide Groundwater Monitoring Plan for the 2022 Monitoring Year, October 2021–September 2022, Revision 1" (2022 IFGMP), both prepared in accordance with the 2016 Compliance Order on Consent.

All active monitoring locations in the Chromium Investigation monitoring group are located within the Mortandad Canyon and Sandia Canyon watersheds. The Chromium Investigation monitoring group includes the monitoring of groundwater wells and well screen locations.

This PMR presents monitoring results for four quarterly and eight monthly periodic monitoring events (PMEs) conducted during the second, third, and fourth quarters of monitoring year (MY) 2021 and the first quarter of MY 2022. In addition to results from these PMEs, results are reported for the previous four PMEs, as well as earlier Chromium Investigation monitoring group PMEs that have not yet been reported because the validated laboratory data were not available at the time of the previous Chromium Investigation PMR publications.

Groundwater samples collected during the PMEs were analyzed for all or some of the following analytical groups as specified in the 2021 IFGMP and 2022 IFGMP: metals; volatile organic compounds; semivolatile organic compounds; low-level 1,4-dioxane; low-level nitrosamines; per- and polyfluoroalkyl substances; polychlorinated biphenyls; radionuclides (including tritium and low-level tritium); naphthalene sulfonate tracers; sodium perrhenate tracers; deuterated water tracers; and general inorganic chemicals (including perchlorate). The same samples were also analyzed for the following field parameters: dissolved oxygen, flow rate (in gallons per minute), oxidation-reduction potential, pH, specific conductance, temperature, and turbidity.

A total of 51 groundwater analytical results reported in this PMR were detected above applicable screening values.

			12/07/2021[b]	12/21/2021

[a] Quarterly sampling event.

[b] Monthly sampling event.

The annual Chromium Investigation monitoring group PMR is submitted to the New Mexico Environment Department (NMED) every May and includes results from the Chromium Investigation monitoring group PMEs performed through the first quarter of the monitoring year (MY). This PMR presents monitoring results for four quarterly and eight monthly PMEs conducted during the second, third, and fourth quarters of MY 2021 and the first quarter of MY 2022. In addition to results from the PMEs listed in the table above, results are reported for the previous four PMEs as well as data from earlier Chromium Investigation monitoring group PMEs that have not yet been reported because the validated laboratory data were not available at the time of the previous Chromium Investigation PMR publications.

The PMEs reported in this PMR include sampling of groundwater wells and well screen locations pursuant to the “Interim Facility-Wide Groundwater Monitoring Plan for the 2021 Monitoring Year, October 2020–September 2021, Revision 1” (hereafter referred to as the 2021 IFGMP) (N3B 2020, 701041) and the “Interim Facility-Wide Groundwater Monitoring Plan for the 2022 Monitoring Year, October 2021–September 2022, Revision 1” (hereafter referred to as the 2022 IFGMP) (N3B 2021, 701449), both prepared in accordance with the 2016 Compliance Order on Consent (the Consent Order).

Section IX of the Consent Order describes the role of data screening in the corrective action process. Screening values are used to identify the *potential* for unacceptable risk resulting from the presence of contaminants in groundwater and surface water. Screening values for evaluating IFGMP monitoring data include New Mexico Water Quality Control Commission (NMWQCC) groundwater standards, U.S. Environmental Protection Agency (EPA) maximum contaminant levels (MCLs), NMED screening levels for tap water, and EPA regional screening levels for tap water. Additional risk evaluation is required to determine the potential need for cleanup (corrective action) if results indicate that contaminants pose an unacceptable risk.

This report presents the following information:

- general background information for the Chromium Investigation monitoring group;
- scope of activities for the Chromium Investigation monitoring group;
- regulatory criteria for screening analysis;
- monitoring results (field parameters, groundwater elevations);
- analytical data results; and
- a summary of the monitoring data and the results of screening analysis.

All information associated with analyses of radionuclides is voluntarily provided to NMED in accordance with U.S. Department of Energy (DOE) policy.

1.1 Background

The Chromium Investigation monitoring group is located in Sandia Canyon and Mortandad Canyon watersheds. Monitoring focuses on the characterization, fate, and transport of chromium contamination in perched-intermediate groundwater and within the regional aquifer. The distribution of wells in the monitoring group addresses the regional aquifer chromium plume corresponding to historical discharges from the Technical Area 03 (TA-03) cooling tower in western Sandia Canyon. The wells also monitor groundwater potentially affected by historical releases from Outfall 051, which discharges from the radioactive liquid waste treatment facility (RLWTF) in the Mortandad Canyon watershed. This discharge was suspended from 2011 to June 2019 because of process changes at the RLWTF. While chromium discharge sources have been discontinued, current water discharges including the power plant, sanitary wastewater, and cooling tower effluent discharge from operating facilities continue to influence the occurrence of perennial streamflow and alluvial groundwater conditions in the upper and middle portions of the canyon system.

Figure 1.0-1 is a Chromium Investigation monitoring group vicinity map that provides a depiction of the canyons. Monitoring locations are shown in Figure 1.0-2.

Sandia Canyon is located on Los Alamos National Laboratory (LANL or the Laboratory) property within TA-03 at an elevation of approximately 7300 ft above mean sea level (amsl). The canyon trends east-southeast across the Laboratory, Bandelier National Monument, and San Ildefonso Pueblo and empties into the Rio Grande in White Rock Canyon at an elevation of 5450 ft amsl. The area of the Sandia Canyon watershed is approximately 5.5 mi^2. Present-day discharges such as sanitary wastewater and cooling tower effluent from operating facilities continue to influence perennial streamflow and saturated alluvial groundwater conditions in the upper and middle portions of the canyon system. A wetland of approximately 7 acres has developed in the upper portion of the canyon under the effluent discharge influence. The only known perennial spring in the watershed, Sandia Spring, is located in lower Sandia Canyon near the Rio Grande. Technical areas located in the Sandia Canyon watershed include TA-03, TA-53, TA-60, TA-61, TA-72, and former TA-20. A total of 261 solid waste management units (SWMUs) and areas of concern (AOCs) are located within the portions of these technical areas in the Sandia Canyon watershed; of these, 179 are located in Upper Sandia Canyon Aggregate Area, and 82 are located in Lower Sandia Canyon Aggregate Area.

Mortandad Canyon is an east-to-southeast trending canyon that heads on the Pajarito Plateau near the main Laboratory complex at TA-03 at an elevation of 7380 ft amsl. The drainage extends about 9.6 mi from its headwaters to its confluence with the Rio Grande at an elevation of 5440 ft amsl. The canyon crosses San Ildefonso Pueblo land for several miles before joining the Rio Grande (LANL 1997, 056835).

The Mortandad Canyon watershed is located in the central portion of the Laboratory and covers approximately 10 mi^2. The Mortandad Canyon watershed contains several tributary canyons including Ten Site Canyon, Pratt Canyon, Effluent Canyon, and Cañada del Buey, which have received contaminants released during Laboratory operations. Technical areas located in the Mortandad Canyon watershed include TA-03, TA-05, TA-35, TA-48, TA-50, TA-52, TA-55, TA-60, TA-63, former TA-04, and former TA-42. A total of 257 SWMUs and AOCs are located within the portions of these technical areas in the Mortandad Canyon watershed; of these, 119 are located within Upper Mortandad Canyon Aggregate Area, 132 are located in Middle Mortandad/Ten Site Canyons Aggregate Area, and 6 are located in Lower Mortandad/Cedro Canyons Aggregate Area.

For wells reported in this PMR, chromium concentrations exceed the 50-µg/L NMWQCC groundwater standard in perched-intermediate wells SCI-2 and MCOI-6, and in regional aquifer wells CrPZ-1, CrPZ-2a, CrPZ-3, CrPZ-4, CrPZ-5, R-43 screen 1, R-45 screen 2, R-62, and R-70 screen 2.

The chromium present in wells in the monitoring group originated from daily blowdown into Sandia Canyon from 1956 until 1972 from cooling towers at the Laboratory's power plant located at the head of Sandia Canyon. The blowdown combined with effluent-supported surface water flowed downcanyon and infiltrated into the vadose zone, where lateral migration pathways moved percolating water to locations beneath Mortandad Canyon and eventually into the regional aquifer. These sources and the migration pathways are described in the "Investigation Report for Sandia Canyon" (LANL 2009, 107453) and the "Phase II Investigation Report for Sandia Canyon" (LANL 2012, 228624).

For wells reported in this PMR, perchlorate exceeds the 13.8-µg/L NMWQCC groundwater standard in perched-intermediate well MCOI-6, the primary source of which is historical effluent releases from the TA-50 RLWTF. A conceptual model for the sources and distribution of perchlorate is presented in the "Investigation Report for Sandia Canyon" (LANL 2009, 107453) and the "Phase II Investigation Report for Sandia Canyon" (LANL 2012, 228624).

2.0 SCOPE OF ACTIVITIES

All active monitoring locations in the Chromium Investigation monitoring group are located within Mortandad Canyon and Sandia Canyon watersheds. Monitoring locations include 4 groundwater wells completed within the perched-intermediate aquifer and 30 groundwater wells completed within the deep regional aquifer. This includes 5 regional chromium piezometer wells added to the 2022 IFGMP. Of the 4 groundwater wells completed in the perched-intermediate, 2 are on the watch list. Additionally, 3 wells completed within the alluvial aquifer, 1 well completed within the perched-intermediate aquifer, and 1 well completed within the regional aquifer are monitored for water levels only.

Groundwater samples collected during the PMEs were analyzed for all or some of the following analytical groups as specified in the 2021 IFGMP and 2022 IFGMP: metals; volatile organic compounds (VOCs); semivolatile organic compounds (SVOCs); low-level 1,4-dioxane; low-level nitrosamines; per- and polyfluoroalkyl substances (PFAS); polychlorinated biphenyls; radionuclides (including tritium and low-level tritium); naphthalene sulfonate tracers; sodium perrhenate tracers; deuterated water tracers; and general inorganic chemicals (including perchlorate). The same samples were also analyzed for the following field parameters: dissolved oxygen, flow rate (in gallons per minute), oxidation-reduction potential, pH, specific conductance, temperature, and turbidity.

Purge water is managed and characterized in accordance with the relevant version of the "Waste Characterization Strategy Form," N3B-AP-TRU-2150, R.0. Purge water is stored until characterization is complete, and if requirements are met, the purge water can be land-applied in accordance with the standard operating procedure (SOP) "Land Application of Groundwater" (N3B-SOP-ER-3006, R0), and

"Regulatory Requirements for the Land Application of Groundwater" (N3B-QP-RGC-0002, R0), which implements the NMED-approved decision tree for land application of drilling, development, rehabilitation, and sampling purge water.

Table 2.0-1 provides information about each well sampled during the report's PME. Information provided includes the well location name and watershed; the MY and quarter of the sampling event; the sample collection date; each well's screened interval with top and bottom screen depths; and the casing volume, purge volume, and purge or flow rate for each sampling event.

Watch list wells are identified by N3B and NMED as perched-intermediate and regional groundwater monitoring wells for which water-quality data for certain constituents are not representative or are of questionable representativeness. Wells are assigned to the watch list if site-specific criteria are met. Data examined for the assessment include field parameters associated with samples at the time of collection, major-ion concentrations, trace-metal concentrations, and detections of organic constituents. The assessments are based on site-specific geochemical criteria. The complete index of watch-list locations can be found in Appendix E of the 2021 IFGMP and 2022 IFGMP (N3B 2020, 701041; N3B 2021, 701449).

The following wells and well screens are on the watch list:

- MCOI-5: the well no longer yields sufficient water for sampling. The water level at MCOI-5 has been steadily declining over the past 10 yr and as of January 2021 is less than 0.5 ft above the bottom of the screen, which is an insufficient volume to collect samples. This well will be monitored for water levels and if sufficient recharge occurs allowing water level to rise to 3.5 ft above the bottom of the screen (6124.2 ft amsl), a prioritized suite consisting of perchlorate, PFAS, metals, and additional general inorganics will be collected after 1 casing volume plus drop-pipe volume is purged regardless of field parameter stability.
- SCI-1: there is limited volume of water and extremely low recovery rate. Additionally, the field parameters do not stabilize. Samples will be collected in accordance with the prioritized sampling suite listed for SCI-1 after 1 casing volume plus drop-pipe volume is purged, regardless of field parameter stability.

2.1 PME Observations and Deviations from Planned Scope

Table 2.1-1 summarizes the observations and deviations from the planned monitoring scope for this annual PMR.

3.0 REGULATORY CRITERIA

Regulatory criteria related to groundwater quality form the basis for the screening values with which groundwater monitoring results are compared in this PMR. These criteria include the NMWQCC groundwater standards, EPA MCLs, NMED screening levels for tap water, and EPA regional screening levels for tap water. These criteria are used to screen results in accordance with the process specified in Section IX of the Consent Order, as listed in Table 3.0-1.

Monitoring data are evaluated using the screening process described below. The sources for standards and screening levels from which specific screening values are established are listed in Table 3.0-1 based on the following criteria:

- For each individual substance, the lower concentration of the NMWQCC groundwater standard or the EPA MCL is used as the screening value.
- If the NMWQCC groundwater standard or the EPA MCL has not been established for a specific substance for which toxicological information is published, the NMED screening level for tap water is used as the groundwater screening value. NMED screening levels are established for either a cancer- or noncancer-risk type; for the cancer-risk type, screening levels are based on a 1×10^{-5} excess cancer risk. This report was prepared using the November 2021 NMED "Risk Assessment Guidance for Site Investigations and Remediation" (NMED 2021, 701849).
- If the NMED screening level for tap water has not been established for a specific substance for which toxicological information is published, the EPA regional screening level for tap water is used as the groundwater screening value. The EPA screening levels are established for either a cancer- or noncancer-risk type. For the cancer-risk type, the Consent Order specifies screening at a 1×10^{-5} excess cancer risk. The EPA screening levels for tap water are at 1×10^{-6} excess cancer risk; therefore, 10 times the EPA 1×10^{-6} screening levels are used in the screening process. This report was prepared using the November 2021 EPA regional screening levels for tap water (http://www.epa.gov/risk/risk-based-screening-table-generic-tables).
- The NMWQCC groundwater standards apply to specified contaminants in the dissolved (filtered) portion of samples. However, the standards for mercury and organic compounds apply to the concentrations of the contaminants in unfiltered samples. For this report, EPA MCLs are applied to contaminant concentrations in both filtered and unfiltered sample results.

4.0 MONITORING RESULTS

4.1 Methods and Procedures

All methods and procedures used to perform the field activities associated with the data reported in this PMR are documented in the 2021 IFGMP (N3B 2020, 701041) and 2022 IFGMP (N3B 2021, 701449).

4.2 Comparison of Target Analytes and Method Detection Limits

Several analytes have a range of method detection limits (MDLs). For some of these analytes, the current MDL is much lower than former MDLs for earlier analyses. Table 4.2-1 presents a list of target analytes with MDLs equal to or above screening values. Table 4.2-2 presents a list of analytes where the lower range of MDLs is below the screening value but the upper portion of the range is above the screening value. Target analytes with MDLs entirely below the screening value are not listed. The analytical method and analytical laboratory are included in the tables for reference.

4.3 Field Parameter Results

Appendix A presents field parameter measurements associated with the sampling and analytical data reported in this PMR, including dissolved oxygen, flow rate, oxidation-reduction potential, pH, specific conductance, temperature, and turbidity. Table 2.1-1 notes any instances where field parameter measurement requirements could not be met.

4.4 Groundwater Elevations

The groundwater elevation is measured at each monitoring location before purging and sampling at that location, as required by the Consent Order.

In addition to collecting groundwater elevation data before purging and sampling, N3B collects groundwater elevation data continuously (e.g., hourly, daily) for most monitoring locations, and these data are voluntarily presented in this PMR. Any gaps in the continuous groundwater elevation records presented in this PMR are a result of one or more of the following conditions:

- The well is dry.
- The well is not equipped with a pressure (level) transducer.
- The water level is below the transducer.
- The transducer is not functioning properly (including failure).
- The transducer is temporarily removed from the well for maintenance and/or calibration.

Data gaps exist at the following locations:

- MCA-9, MCO-9, and MCO-12 are alluvial water-level monitoring wells that are monitored to meet the Discharge Permit 1793 requirement to monitor historically dry wells for verification that land application of wastewater does not result in local saturation. MCA-9, MCO-9 and MCO-12 were dry during the PMEs reported in this PMR.
- R-28 transducer failed on June 28, 2020, and was replaced on January 26, 2021. No data is available for this time period.
- R-42 transducer was removed for well maintenance on November 9, 2020, and replaced on January 25, 2021. There are no data for this period.

Groundwater elevation data from the end of the previous PME and through the end of the PMEs in this report are presented in Appendix B (on CD included with this document), and include all continuous groundwater elevation data. Groundwater elevation measurements are shown graphically on Plate 1.

For wells equipped with transducers, the reported groundwater elevation was the first measurement taken each day. Figure 4.4-1 shows the elevation of the regional groundwater surface and flow directions from June 15, 2021. Regional aquifer surface contours are drawn by hand in accordance with the three point solution method as described by EPA (https://cfpub.epa.gov/si/si_public_record_report.cfm?dirEntryId=287064&Lab=NRMRL). Adjacent wells are grouped into triplets and straight lines are drawn connecting them, making a triangle. Using the methods of Heath (https://pubs.usgs.gov/wsp/2220/report.pdf), a gradient vector is calculated for each set of triplets. This method assumes that the water table surface is planar, that flow is mostly horizontal, and that there is no pumping or injection. Since these assumptions are not always appropriate, some interpretation is necessary to produce a realistic potentiometric surface. Groundwater flow vectors are perpendicular to the contour lines and point downgradient. These vectors were calculated using the transect tool in QGIS.

No perched-intermediate groundwater contours are shown in Figure 4.4-1. However, all groundwater elevation data for locations with transducers are reported in Appendix B and on Plate 1.

5.0 ANALYTICAL DATA RESULTS

5.1 Methods and Procedures

All methods and procedures used to perform the analysis for the data reported in this PMR are documented in 2021 IFGMP (N3B 2019, 700451) and the 2022 IFGMP ((N3B 2020, 700927). Samples and field-data collection are conducted using SOPs that are part of a comprehensive quality assurance/quality control (QA/QC) program. These SOPs are listed and described in Appendix B of the IFGMPs.

Sampling and analysis plans (SAPs) are created using 2021 and 2022 IFGMP Tables 1.8-1, 1.11-1, and 3.4-1 (N3B 2020, 701041). SAPs include additional field collection, transportation, and field QA/QC criteria as identified in the N3B data quality objectives (DQOs) and in the Consent Order. A sample collection log is created from the SAP and is used to maintain a chain-of-custody (COC) document and an analytical request form.

Field QA/QC sampling and analysis is employed as an aspect of the QA/QC program to assist in qualifying field sample analytical results. These samples include field blanks (FBs), equipment rinsate blanks (EQBs), performance evaluation blanks (PEBs), field trip blanks (FTBs), and field duplicates (FDs). These field QA/QC samples support monitoring the quality of field sample collection, shipping processes, and analytical laboratory processes. Additional description regarding these types of QA/QC samples is provided in Appendix D of the 2021 IFGMP (N3B 2020, 701041) and 2022 IFGMP (N3B 2021, 701449).

Following sample collection, sampling personnel deliver the samples and the sample collection log to sample management personnel at the N3B Sample Management Office. An analytical COC document is then created, which includes the field sample identification (ID) number, the date and time of field sample collection, the analytical parameters group code, and the number of bottles for each analytical parameters group. Samples are then shipped to analytical laboratories for analysis.

In addition to analyzing the field samples and field QA/QC samples, analytical laboratories also employ laboratory batch QA/QC samples. These include matrix spikes, duplicates, method blanks, and laboratory control samples that are prepared and analyzed by the laboratories to monitor their analytical process quality.

The analytical data are submitted by the analytical laboratory and uploaded to the N3B Environmental Information Management (EIM) database. The received data are then independently validated through the N3B data validation process, per the DQOs described below, to qualify the data.

Analytical results meet the N3B minimum DQOs as outlined in N3B-PLN-SDM-1000, “Sample and Data Management Plan.” N3B-PLN-SDM-1000 sets the validation frequency criteria at 100% Level 1 examination and Level 2 verification of data and at 10% minimum Level 3 validation of data. A Level 1 examination assesses the completeness of the data as delivered from the analytical laboratory, identifies any reporting errors, and checks the usability of the data based on the analytical laboratory’s evaluation of the data. A Level 2 verification evaluates the data to determine the extent to which the laboratory met the analytical method and the contract-specific QC and reporting requirements. A Level 3 validation includes Levels 1 and 2 criteria and determines the effect of potential anomalies encountered during analysis and possible effects on data quality and usability. A Level 3 validation is performed manually with method-specific data validation procedures. Laboratory analytical data are validated by N3B personnel as outlined in N3B-PLN-SDM-1000; N3B-AP-SDM-3000, “General Guidelines for Data Validation”; N3B-AP-SDM-3014, “Examination and Verification of Analytical Laboratory Data”; and additional method-specific analytical data validation procedures. All associated validation procedures have been developed, where applicable, from the EPA QA/G-8, “Guidance on Environmental Data Verification and

Data Validation" (https://www.epa.gov/sites/production/files/2015-06/documents/g8-final.pdf), the "Department of Defense (DoD)/Department of Energy (DOE) Consolidated Quality Systems Manual (QSM) for Environmental Laboratories" (https://denix.osd.mil/edqw/documents/manuals/qsm-version-5-3-final/), the EPA "National Functional Guidelines for Data Review" (https://www.epa.gov/clp/superfund-clp-national-functional-guidelines-nfgs-data-review), and the American National Standards Institute/American Nuclear Society 41.5, "Verification and Validation of Radiological Data for Use in Waste Management and Environmental Remediation" (https://webstore.ansi.org/standards/ansi/ansians412012).

Validation qualifiers and reason codes applied during this process are also reviewed and approved by an N3B chemist to assess data usability and quality. The EIM data are then made available to the public in the Intellus New Mexico database (https://intellusnm.com/).

5.2 Analytical Data

Appendix C presents the analytical data for the PMEs reported in this PMR and from the previous four sampling events. Table C-1 of the appendix contains all data for this reporting period. Table C-2 contains all detections of analytes from this reporting period plus the respective results from the four previous sampling events. The data were reviewed for compliance with regulatory and N3B requirements and are reported as follows:

- For all data
  - ❖ FD results, reanalysis results, and results of the same analytes from the same sample analyzed by different analytical methods are reported.
  - ❖ Data that are R-qualified (rejected and thus unusable because of analytical problems and/or noncompliance with QA/QC criteria during independent validation) are still reported.
  - ❖ Laboratory QA/QC results, FTB data, FB data, EQB data, and PEB data are not included in the data set.
  - ❖ Data for certain target analytes from watch-list wells that are not representative or are of questionable representativeness are not reported.
  - ❖ All other results are reported for all locations.
- For radionuclide data:
  - ❖ Constituents analyzed and reported for the gamma spectroscopy suite include cesium-137, cobalt-60, neptunium-237, potassium-40, and sodium-22.
  - ❖ Americium-241 and uranium-235 data from chemical separation alpha spectroscopy are reported. Gamma spectroscopy results for these analytes are not presented.
  - ❖ All other radionuclide results are reported for all locations.

Multiple analyses of the same analyte in a sample, including dilutions and reanalyses, create multiple results. These multiple results for the same analyte have the same sample ID, analytical laboratory code, and analytical method. Validation determines the more accurate result, which is marked with a best-value flag of "Y" (yes). The other results for that analyte, which were validated to be of lower quality, are assigned a best-value flag of "N" (no). The best-value flag is included in Appendix C.

Appendix D presents each analytical result detected at a concentration of greater than half the applicable screening value. Results with a best-value flag of “N” are included in Appendix D but not discussed in the text.

Table 5.2-1 provides groundwater analytical results detected at concentrations greater than screening values. Multiple detections are included except for FD exceedances. For example, if aluminum were detected above its screening value in both a primary sample and a FD, only the primary sample result would be reported. If aluminum were detected above its screening value in the FD but not in the primary sample, then the FD would be recorded.

The analytical results for radionuclides and radioactivity are voluntarily compared with the Derived Concentration Technical Standard (DOE 2011, 600493) for groundwater but are not reported in Table 5.2-1 or Appendix D.

Graphs in Appendix E display analyte concentration histories for monitoring group locations where the analyte was detected above the screening value at least once in the historical set that includes these PMEs in addition to data from the previous 3 yr if available. Appendix E may include instances where the analyte data are evaluated using a higher screening value than that used to evaluate previously reported analyte data. For example, the current screening value of 13.8 µg/L for perchlorate is greater than the former screening value of 4 µg/L, which was used to evaluate previously reported analyte data. If there are exceedances of the current screening value by the data reported in this PMR, the graphs depict the current analyte screening value. If there are no exceedances of current values but at least one exceedance of the former (lower) screening value by the previously reported analytical data, the graphs depict the former lower screening value. Magenta lines indicate the PMR reporting period. Results with a best value flag of “N” are not included in Appendix E.

The analytical laboratory reports, including COC forms and data validation forms, are provided in Appendix F (on DVD included with this document).

5.2.1 Groundwater

Table 5.2-1 shows that 51 groundwater analytical results reported in this PMR were above applicable screening values. These exceedances involve the following four analytes: chromium (filtered); 1,4-dioxane (unfiltered); nitrate-nitrite as nitrogen (filtered); and perchlorate (filtered). The following section details when and where these exceedances were detected. Figure 5.2-1 shows chromium exceedances.

5.2.1.1 Perched-Intermediate Monitoring Wells

MCOI-6

At MCOI-6, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the February 8, 2021; May 4, 2021; July 29, 2021; and November 8, 2021, sampling events with respective concentrations of 60.6 µg/L, 55.5 µg/L, 58.1 µg/L and 56.4 µg/L. Historically, from February 2011 to November 2020, these concentrations have ranged from 49.6 µg/L to 86.6 µg/L.

At MCOI-6, 1,4-dioxane concentrations were detected over the NMED tap water screening level of 4.59 µg/L during the May 4, 2021, and November 8, 2021, sampling events with respective concentrations of 30.5 µg/L and 23.4 µg/L (using SW-846:8270E SVOC-selected ion monitoring [SIM] analyses). Historically, from May 2011 to November 2020, 1,4-dioxane concentrations at MCOI-6 have ranged from 7.39 µg/L to 28.3 µg/L.

At MCOI-6, nitrate-nitrite as nitrogen concentrations were detected above the EPA MCL screening value of 10 mg/L during the February 8, 2021; May 4, 2021; July 29, 2021; and November 8, 2021, sampling events with respective concentrations of 12.4 mg/L, 13.1 mg/L, 12.9 mg/L, and 13.5 mg/L. Historically, from February 2013 to January 2019, nitrate-nitrite as nitrogen concentrations at MCOI-6 have ranged from 7.62 mg/L to 12.8 mg/L.

At MCOI-6, perchlorate concentrations were detected above the NMED tap water screening level of 13.8 µg/L during the February 8, 2021; May 4, 2021; July 29, 2021; and November 8, 2021, sampling events with respective concentrations of 83.8 µg/L, 96.8 µg/L, 97.9 µg/L, and 102.0 µg/L. Historically, from February 2013 to November 2019, perchlorate concentrations at MCOI-6 have ranged from 56.3 µg/L to 124 µg/L.

SCI-2

At SCI-2, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the February 9, 2021; May 13, 2021; July 27, 2021; and November 3, 2021, sampling events with respective concentrations of 234.0 µg/L, 235.0 µg/L, 235.0 µg/L, and 235.0 µg/L. Historically, from August 2011 to November 2020, chromium concentrations have ranged from 244.0 µg/L to 511.0 µg/L.

5.2.1.2 Regional Monitoring Wells

The 2022 IFGMP (N3B 2021, 701449) incorporates five piezometers (CrPZ-1, CrPZ-2a, CrPZ-3, CrPZ-4, and CrPZ-5) that were initially installed for collection of water-level data and screening-level geochemistry data. A review of historical data from the piezometers indicated that they are now likely producing representative data and are sampled for performance monitoring on a quarterly basis.

CrPZ-1

At CrPZ-1, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the November 4, 2021, sampling event with a concentration of 72.5 µg/L. This is the first result that is not screening-level geochemistry data.

CrPZ-2a

At CrPZ-2a, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the November 10, 2021, sampling event with a concentration of 239.0 µg/L. This is the first result that is not screening-level geochemistry data.

CrPZ-3

At CrPZ-3, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the November 9, 2021, sampling event with a concentration of 300.0 µg/L. This is the first result that is not screening-level geochemistry data.

CrPZ-4

At CrPZ-4, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the November 10, 2021, sampling event with a concentration of 92.5 µg/L. This is the first result that is not screening-level geochemistry data.

CrPZ-5

At CrPZ-5, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the November 22, 2021, sampling event with a concentration of 411.0 µg/L. This is the first result that is not screening-level geochemistry data.

R-43 Screen 1

At R-43 screen 1, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the February 9, 2021; May 5, 2021; July 19, 2021; and November 18, 2021 sampling events with respective concentrations of 189.0 µg/L, 194.0 µg/L, 188.0 µg/L, and 199.0 µg/L. Historically, from February 2011 to November 2019, these concentrations have ranged from 16 µg/L to 223 µg/L.

R-45 Screen 2

At R-45 screen 2, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the March 23, 2021; April 20, 2021; July 14, 2021; August 12, 2021; September 9, 2021; October 20, 2021; November 18, 2021; and December 7, 2021 sampling events with respective concentrations of 51.4 µg/L, 51.4 µg/L, 57.7 µg/L, 52.7 µg/L, 50.4 µg/L, 58.1 µg/L, 57.4 µg/L, and 59.0 µg/L. Historically, from May 2011 to December 2020, these concentrations have ranged from 7.91 µg/L to 55.0 µg/L.

R-62

At R-62, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the February 2, 2021; May 14, 2021; July 23, 2021; and November 19, 2021 sampling events with respective concentrations of 331.0 µg/L, 319.0 µg/L, 271.0 µg/L, and 288.0 µg/L. Historically, from November 2014 to November 2020, these concentrations have ranged from 104 µg/L to 346 µg/L.

R-70 Screen 2

At R-70 screen 2, chromium concentrations were detected above the NMWQCC groundwater standard of 50 µg/L during the January 21, 2021; February 19, 2021; March 18, 2021; April 14, 2021; May 12, 2021; June 14, 2021; July 20, 2021; August 20, 2021; September 17, 2021; October 15, 2021; November 8, 2021; and December 8, 2021 sampling events with respective concentrations of 210.0 µg/L, 235.0 µg/L, 246.0 µg/L, 202.0 µg/L, 208.0 µg/L, 219.0 µg/L, 188.0 µg/L, 178.0 µg/L, 207.0 µg/L, 205.0 µg/L, 190.0 µg/L, and 183.0 µg/L. Historically, from May 2019 to November 2019, these concentrations have ranged from 246 µg/L to 265 µg/L.

5.3 Sampling Program Modifications

In 2017, R-28 and R-42 were removed from the Chromium Investigation monitoring group and repurposed to support the interim measure (IM) investigations and plume-center characterization. Proposed monitoring of R-42 as part of the 2023 IFGMP will be dependent upon the review of the R-42 Performance report in June 2022 by NMED.

The 2023 IFGMP Chromium Investigation monitoring group has the additional groundwater monitoring of new wells R-71 screen 1, R-71 screen 2, R-72 screen 2, R-72 screen 2, R-73 screen 1, and R-73 screen 2.

Piezometer CrPZ-2a has shown very low dissolved oxygen field parameter values and is being evaluated for inclusion in Appendix E watch list in the 2023 IFGMP.

6.0 SUMMARY AND INTERPRETATIONS

6.1 Monitoring Results

Appendix A presents the field parameter measurements associated with the sampling and analysis data reported within this PMR.

6.2 Analytical Results

Appendix C presents the analytical data associated with the sampling reported within this PMR.

6.2.1 Groundwater

A total of 51 groundwater analytical results reported in this PMR were above applicable screening values (Table 5.2-1). For these results, the types of contaminants detected and their concentrations are consistent with data reported in previous PMRs for this monitoring group, with the following exceptions.

6.2.1.1 Perched-Intermediate Monitoring Wells

The MCOI-6 unfiltered 1,4-dioxane concentration of 30.5 µg/L collected on May 4, 2021, was the highest observed to date. The previous maximum concentration was 28.3 µg/L collected on November 14, 2019.

The MCOI-6 filtered nitrate-nitrite as nitrogen concentration of 13.5 mg/L collected on November 8, 2021, was the highest observed to date. The previous maximum concentration was 12.8 mg/L collected on November 9, 2019.

The SCI-2 filtered chromium concentration of 234 µg/L collected on February 9, 2021, was the lowest concentration observed to date. The previous minimum concentration was 244 µg/L collected on November 4, 2020.

6.2.1.2 Regional Monitoring Wells

The R-45 screen 2 filtered chromium concentration of 62.0 µg/L collected on October 20, 2021, was the highest concentration to date. The previous maximum concentration was 55.0 µg/L collected on December 16, 2020.

The R-70 screen 2 filtered chromium concentration of 178 µg/L collected on August 20, 2021, was the lowest concentration to date. The previous minimum concentration was 250 µg/L collected on December 3, 2020.

6.3 Data Gaps

Table 2.1-1 summarizes fieldwork deviations from the planned monitoring scope for this PMR including data gaps and cancelations because of sampling complications.

6.4 Remediation System Monitoring

The IM involves pumping contaminated groundwater from the regional aquifer using extraction wells, treating the water at the surface using ion exchange to reduce the chromium concentrations to values at or below 90% of the groundwater standard (i.e., 45 µg/L) in accordance with Discharge Permit 1835, and reinjecting the treated water into the regional aquifer through a series of injection wells located along the

plume periphery. The performance monitoring wells, all of which are ideally located for monitoring the performance of the IM, include R-11, R-35a, R-35b, R-50 screens 1 and 2, R-44 screens 1 and 2, R-45 screens 1 and 2, SIMR-2, R-61 screen 1, and R-70 screens 1 and 2. All data generated pursuant to the IFGMP for all chromium area wells are presented in this PMR.

[a] gpm = Gallons per minute.

[b] MCOI-5 is on the watch list because it no longer yields sufficient volumes for sampling.

[c] Quarterly sampling event.

[d] — = Not applicable.

[e] SCI-1 is on the watch list because water volume is limited and field parameters do not stabilize; samples are collected regardless of field-parameter stability.

[f] Monthly sampling event.

[g] S1 = Screen 1.

[h] S2 = Screen 2.

[i] R-70 S1 is an angled well drilled approximately 25° from vertical. Depth values represent linear feet along (down) the borehole.

[j] R-70 S2 is an angled well drilled approximately 25° from vertical. Depth values represent linear feet along (down) the borehole.

Trichloropropane[1,2,3-]	0.333	SW-846:8260D	0.00835	µg/L	NMED A1 TAP SCRN LVL	GELC

Note: This table is applicable to samples reported in this PMR and includes historical data statistics from 10 yr before the earliest start date in the PMR.

[a] EPA TAP SCRN LVL = U.S. Environmental Protection Agency generic screening level for tap water.

[b] GELC = General Engineering Laboratories, LLC, Charleston, SC.

[c] NMED A1 TAP SCRN LVL = New Mexico Environment Department screening level for tap water.

[d] NM GW STD = New Mexico Water Quality Control Commission groundwater standard.

[e] EPA MCL = U.S. Environmental Protection Agency maximum contaminant level.

Table 4.2-2
Target Analytes with MDL Values that Range Above and Below Screening Values

Analyte Name	MDL	Analytical Method	Screening Value	Unit	Screening-Value Type	Lab ID
Semivolatile Organic Compounds						
Atrazine	2.94– 3	SW-846:8270D	3	µg/L	NM GW STD[a]	GELC[b]
Atrazine	2.9–3.14	SW-846:8270E	3	µg/L	NM GW STD	GELC
Pentachlorobenzene	2.9–3.14	SW-846:8270E	3.07	µg/L	NMED A1 TAP SCRN LVL[c]	GELC

Notes: This table is applicable to samples reported in this PMR and includes historical data statistics from 10 yr before the earliest start date in the PMR. For this table, the lower value of the MDL range is below the screening value, while the upper value is equal to or above the screening value.

[a] NM GW STD = New Mexico Water Quality Control Commission groundwater standard.

[b] GELC =General Engineering Laboratories, LLC, Charleston, SC.

[c] NMED A1 TAP SCRN LVL = New Mexico Environment Department screening level for tap water.

[a] WG = Groundwater.

[b] gpm = Gallons per minute.

[c] SU = Standard unit.

[d] NTU = Nephelometric turbidity unit.

[e] — = Not applicable. Missing field sample IDs were not assigned for flow, dissolved oxygen, oxidation-reduction potential, pH, specific conductance, temperature, or turbidity field parameters at this location. Data are from the field notes.

[f] S1 = Screen 1.

[g] S2 = Screen 2.

Appendix B

Groundwater Elevation Measurements
(on CD included with this document)

Appendix C

Analytical Chemistry Results, Including Results from Previous Four Monitoring Events if Available

The following pages provide lists of (1) acronyms, abbreviations, and symbols; (2) analytical laboratory qualifier codes; (3) validation qualifiers; and (4) background value sources that may be used in Appendix C. Please note that these comprehensive lists include terms used in prior periodic monitoring reports. This periodic monitoring report may not include all of the terms in the following lists.

Acronyms and Abbreviations

Acronym, Abbreviation, or Symbol	Description
Miscellaneous	
%	percent
%D	percent difference
%R	percent recovery
%RSD	percent relative standard deviation
<	Based on qualifiers, the result was a nondetection.
—	none
4,4'-DDD	4,4'-dichlorodiphenyldichloroethane
4,4'-DDT	4,4'-dichlorodiphenyltrichloroethane
BHC	benzene hexachloride
CB	chlorinated biphenyl
CCB	continuing calibration blank
CCV	continuing calibration verification
CLP	Contract Laboratory Program
CRDL	contract-required detection limit
CRI	CDRL check standard
DCG	Derived Concentration Guide (DOE)
DDE	dichlorodiphenyldichloroethylene
DNX	dinitroso-RDX
DOE	Department of Energy (U.S.)
DQO	data quality objective
EPA	Environmental Protection Agency (U.S.)
GC	gas chromatography
GC/MS	gas chromatography/mass spectrometry
GFAA	graphite furnace atomic absorption
GFPC	gas-flow proportional counter
GW	groundwater
HH OO	human health—organism only (NMWQCC standard)
HMX	1,3,5,7-tetranitro-1,3,5,7-tetrazocine
HPLC	high-pressure liquid chromatography
HRGC/HRMS	high-resolution gas chromatography/high-resolution mass spectrometry
ICAL	initial calibration
ICPAES	inductively coupled plasma atomic (optical) emission spectroscopy
ICV	initial calibration verification

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Miscellaneous (continued)	
IDL	instrument detection limit
IS	internal standard
LAL	lower acceptance limit
LANL	Los Alamos National Laboratory
LCS	laboratory control sample
LLEE	low-level electrolytic extraction
LOC	level of chlorination
LSC	liquid scintillation counting
Lvl	level
MCL	maximum contaminant level (EPA)
MDA	minimum detectable activity
MDC	minimum detectable concentration
MDL	method detection limit
MNX	mononitroso-RDX
MS	matrix spike
MSD	matrix spike duplicate
N3B	Newport News Nuclear BWXT-Los Alamos, LLC
NM	New Mexico
NMED	New Mexico Environment Department
NMWQCC	New Mexico Water Quality Control Commission
OPR	ongoing precision recovery
PCB	polychlorinated biphenyl
PCDD	polychlorinated dibenzo-p-dioxin
PCDF	polychlorinated dibenzofuran
PQL	practical quantitation limit
Prelim	preliminary
QC	quality control
RDX	Royal Demolition Explosive
RF	response factor
RL	reporting limit
RPD	relative percent difference
RRF	relative response factor
RRT	relative retention time
RT	retention time
Scr	screening
SDG	sample delivery group
SMO	Sample Management Office
SSC	suspended sediment concentration

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Miscellaneous (continued)	
SU	standard unit
TCDD	tetrachlorodibenzo-p-dioxin
TCDF	tetrachlorodibenzofuran
TDS	total dissolved solids
TPH-DRO	total petroleum hydrocarbons—diesel range organics
TNX	trinitroso-RDX
TPU	total propagated uncertainty
UAL	upper acceptance limit
Sample Types	
WG	groundwater
WS	base flow
Field Prep Codes	
F	filtered
UF	unfiltered
Analysis Type Code	
DL	dilution
INIT	initial
RE	reanalysis
REDL	reanalysis dilution
REP	replicate of the initial analysis
RI	reissue
TOTC	calculated total
Sample Purpose	
FD	field duplicate
REG	regular
Analytical Method Category	
General Chemistry	general chemistry
HEXP	high explosives
HRGC/HRMS	high-resolution gas chromatography/high-resolution mass spectrometry
INORGANIC	inorganic
LCMS/MS	liquid chromatography [dual] mass spectrometry
LCMS/MS HIGH EXPLOSIVES	liquid chromatography [dual] mass spectrometry for high explosives
LCMS/MS PERCHLORATE	liquid chromatography [dual] mass spectrometry for perchlorate
LEGACY	legacy
PCBCONGENERS	PCB congeners
PESTPCB	pesticides/PCBs
RAD	radiological

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Analytical Method Category (continued)	
SVOC	semivolatile organic compound
TPH	total petroleum hydrocarbons
VOC	volatile organic compound
Detect Flag and Best Value Flag Codes	
N	no
Y	yes
Lab Codes	
AAL	Assaigai Analytical Laboratories, Inc.
ACCU	Acculabs Technologies, Inc.
ALTC	Alta Analytical Laboratory, Inc.
ARS	American Radiation Services, Inc.
ARSL	American Radiation Services-Primary
ATICO	Analytical Technologies, Inc., Historical code one
BABC	Edward S. Babcock & Sons, Inc., Riverside, CA
BAL	Brooks Applied Labs
CFA	Cape Fear Analytical, LLC, Wilmington, NC, Division of the GEL Group, Inc., Charleston SC
C-INC	Isotope and Nuclear Chemistry (LANL)
COAST	Coastal Science Laboratories, Inc.
CST	Chemical Sciences and Technology (LANL)
DRI	Desert Research Institute
EES6	Environmental Sciences (LANL)
GEL	General Engineering Laboratories, LLC
GELC	General Engineering Laboratories, LLC, Charleston, SC
GEO	Geochron Laboratories
HUFFMAN	Huffman Laboratories, Inc.
KA	KEMRON Environmental Services, Inc.
LVLI	Lionville Laboratory, Inc.
NA	not available
PARA	ALS Environmental, Ft. Collins, CO
RECRAP	RECRA Labnet, Lionville, PA
RFWC	Weston Solutions (formerly Roy F. Weston), West Chester, PA
SGSW	Paradigm Environmental Services, Inc.
SHEALY	Shealy Labs
SILENS	Stable Isotopes Laboratory
STL2	Severn Trent Laboratories, Inc., Richland Historical
STLA	Severn Trent Laboratories, Inc., Los Angeles
STR	Severn Trent Laboratories, Inc., Richland

Acronyms and Abbreviations (continued)

Acronym, Abbreviation, or Symbol	Description
Lab Codes (continued)	
STSL	Severn Trent Laboratories, Inc., St. Louis
SwRI	Southwest Research Institute
UAZ	University of Arizona
UIL	University of Illinois
UMTL	University of Miami Tritium Lab
UNK	Unknown (from historical Environmental Remediation Database migration)

Note: A combination of analytical laboratory qualifier codes means that several codes apply.

Analytical Laboratory Qualifiers

Qualifier	Description
*	(Inorganic)—Duplicate analysis (relative percent difference [RPD]) not within control limits.
B	(Organic)—Analyte was present in the blank and the sample. (Inorganic) —Reported value was obtained from a reading that was less than the contract-required detection limit (CRDL) but greater than or equal to the instrument detection limit (IDL).
BPX	(B) (Organic)—This analyte was detected in the associated laboratory method blank and the sample. (B) (Inorganic)—The result for this analyte was greater than the IDL but less than the CRDL. (P) (Pesticides/PCBs)—The quantitative results for this analyte between the primary and secondary gas chromatography (GC) columns were greater than 25% difference. (P) (SW-846 EPA Method 8310, High-Pressure Liquid Chromatography, [HPLC] Results)—The quantitative results for this analyte between the primary and secondary HPLC columns or primary and secondary HPLC detectors were greater than 40% difference. (X) (Organic/Inorganic)—The result for this analyte should be regarded as not detected.
D	The result for this analyte was reported from a dilution.
E	(Organic) Analyte exceeded the concentration range. (Inorganic) The serial dilution was exceeded.
EJN	(E) (Organic)—The result for this analyte exceeded the upper range of the instrument initial calibration curve. (E) (Inorganic) (inductively coupled plasma atomic [optical] emission spectroscopy [ICPAES])—The result for this analyte in the serial dilution analysis was outside acceptance criteria. (E) (Inorganic) (graphite furnace atomic absorption [GFAA])—The result for this analyte failed one or more Control Laboratory Program (CLP) acceptance criteria as explained in the case narrative. (J) (Organic/General Inorganics)—The result for this analyte was greater than the method detection limit (MDL) but less than the practical quantitation limit (PQL). (N) (Organic)—The reported analyte is a tentatively identified compound (TIC). (N) (Inorganic)—The result for this analyte in the matrix spike (MS) sample was outside acceptance criteria.
EN*	(E) (Organic)—The result for this analyte exceeded the upper range of the instrument initial calibration curve. (E) (Inorganic) (ICPAES)—The result for this analyte in the serial dilution analysis was outside acceptance criteria. (E) (Inorganic) (GFAA)—The result for this analyte failed one or more CLP acceptance criteria as explained in the case narrative. (N) (Organic)—The reported analyte is a TIC. (N) (Inorganic)—The result for this analyte in the MS sample was outside acceptance criteria. * (Inorganic)—The result for this analyte in the laboratory replicate analysis was outside acceptance criteria.
H	(Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded.
H*	(H) (Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded. * (Organic) and (Inorganic)—The result for this analyte in the laboratory control sample analysis was outside acceptance criteria.
HJ*	(H) (Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded. (J) (Organic/General Inorganics)—The result for this analyte was greater than the MDL but less than the PQL. * (Inorganic)—The result for this analyte in the laboratory replicate analysis was outside acceptance criteria.
J	(Organic/Inorganic)—The associated numerical value is an estimated quantity.
N	(Inorganic)—Spiked sample recovery was not within control limits.
P	Percent difference between the results on the two columns during the analysis differed by more than 40%.
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or data exception report.
U	The material was analyzed for but was not detected above the level of the associated numeric value.

Analytical Laboratory Qualifiers (continued)

Qualifier	Description
UH*	(U) (Organic/Inorganic)—The result for this analyte was not detected at the specified reporting limit. (H) (Organic/Inorganic)—The required extraction or analysis holding time for this result was exceeded. * (Inorganic)—The result for this analyte in the laboratory replicate analysis was outside acceptance criteria.
UI	(Rad) Gamma spectroscopy result should be regarded as an uncertain identification.
UN	EPA flag (Inorganic)—Compound was analyzed for but was not detected. Spiked sample recovery was not within control limits.
UUI	(Rad) Gamma spectroscopy result should be regarded as an uncertain identification, and the analytical lab assigned these gamma spectroscopy results as not detected.
X	Consult case narrative, data summary package, or project manager concerning the qualifier.

Validation Qualifiers

Qualifier	Description
A	The contractually required supporting documentation for this datum is absent.
I	The calculated sums are considered incomplete because of the lack of one or more congener results.
J	The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual.
J-	The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual with a potential negative bias.
J+	The analyte is classified as detected, but the reported concentration value is expected to be more uncertain than usual with a potential positive bias.
JN-	Presumptive evidence of the presence of the material is at an estimated quantity with a suspected negative bias.
JN+	Presumptive evidence of the presence of the material is at an estimated quantity with a suspected positive bias.
N	There is presumptive evidence of the presence of the material.
NJ	(Organic) Analyte has been tentatively identified, and the associated numerical value is estimated based upon a 1:1 response factor to the nearest eluting internal standard.
NQ	No validation qualifier flag is associated with this result, and the analyte is classified as detected.
PM	Manual review of raw data is recommended to determine if the observed noncompliances with quality acceptance criteria adversely impact data use.
R	The reported sample result is classified as rejected because of serious noncompliances regarding QC acceptance criteria. The presence or absence of the analyte cannot be verified based on routine validation alone.
U	The analyte is classified as not detected.
UJ	The analyte is classified as not detected, with an expectation that the reported result is more uncertain than usual.

Background Values

Background values in Table C-1 are 95% upper tolerance limits with 95% coverage, or the 95th percentile background level where available, as reported in the "Groundwater Background Investigation Report, Revision 5" (LANL 2016, 601920).

REFERENCE

The following reference list includes documents cited in this appendix. Parenthetical information following each reference provides the author(s), publication date, and ERID, ESHID, or EMID. ERIDs were assigned by Los Alamos National Laboratory's (the Laboratory's) Associate Directorate for Environmental Management (IDs through 599999); ESHIDs were assigned by the Laboratory's Associate Directorate for Environment, Safety, and Health (IDs 600000 through 699999); and EMIDs are assigned by N3B (IDs 700000 and above).

LANL (Los Alamos National Laboratory), October 27, 2016. "Groundwater Background Investigation Report, Revision 5," Los Alamos National Laboratory document LA-UR-16-27907, Los Alamos, New Mexico. (LANL 2016, 601920)
